

24 March 2022

## Drilling Recommences at Webbs Consol Silver-Base Metals Project Testing Multiple Targets

### Highlights

- Phase I diamond drilling has recommenced on multiples targets at the Webbs Consol Silver-Base Metals Project.
- Approximately 11 holes for 1,100m is planned to test along strike of the Webbs Consol main shaft, particularly to the south.
- Some 67 historical workings and mineral occurrences have been identified by Lode of which 11 are considered high priority as well as a new drill target with high grade surface mineralisation (Surface grab samples have graded up to 745 g/t Ag, 16.05% Pb, 14.00% Zn and 0.50 g/t Au) 2km south of the Webbs Consol main shaft.
- Those high priority targets include several shafts with a history of high-grade silver production which have never been drilled and may replicate the Webbs Consol main shaft mineralised structure.
- Recently completed initial Phase I drilling returned highly significant intercepts<sup>1,2,3,4</sup>:
  - WCS006: 27.50m @ 468 g/t silver eq or 9.60 % zinc eq  
-incl. 4.40m @ 801 g/t silver eq or 16.43 % zinc eq
  - WCS007: 24.15m @ 374 g/t silver eq or 7.67 % zinc eq  
-incl. 10.30m @ 675 g/t silver eq or 13.85 % zinc eq
- Extensive DHEM and FLEM programs have been booked May 2022 to test the depth extent and widths of Webbs Consol and Lucky Lucy North mineralisation ahead of Phase II drilling.

## Webbs Consol Silver-Base Metal Project – Drilling Recommences on Multiple Targets

Lode Resources Ltd (ASX:LDR or 'Lode' or 'the Company') is pleased to announce the recommencement of drilling on multiples targets at the Webbs Consol Silver-Base Metals Project (EL 89233). Approximately 1,000m is planned.

Subsequent to the success of initial Phase I drilling, where broad high-grade Ag, Zn, Pb mineralisation was intersected at the 100% owed Webbs Consol Silver-Base Metals Project, multiple additional Phase I drill targets have been identified through a combination of Phase I drilling results, mapping, sampling, and an extensive historical literature review. Some 67 historical workings and mineral occurrences have been identified by Lode of which 11 are considered high priority.

In addition to Webbs Consol main shaft, high priority targets include several shafts with a history of high-grade production. Many of these targets are historical mines and government records indicate that these mines were producers of high-grade mineralisation. These mines have been located through a combination of sampling/mapping and a substantial literature review despite more recent surface remediation efforts infilling and covering past mining activities. See Table 1 and Figure 1.

In addition a new drill target with high grade surface mineralisation has been just located 2km south of the Webbs Consol main shaft. Surface grab samples have graded up to 745 g/t Ag, 16.05% Pb, 14.00% Zn and 0.50 g/t Au (see Table 2). Chip/grab sampling is a spot sample technique and assay grade is not regarded as being representative of the grade of the mineralised occurrence in general nor an indication of the width of the mineralised occurrence.

**Table 1:** High priority Phase I drill targets include new target identified 2km south of Shaft 1

| Drill Target                                                     | Mineralisation                          | Metal                     | Drilling                                                                              |
|------------------------------------------------------------------|-----------------------------------------|---------------------------|---------------------------------------------------------------------------------------|
| Shaft 1 (Web Consol main shaft)                                  | Sphalerite, Silver, Galena              | Zn, Ag, Pb                | LDR Phase I drilling intersects broad high-grade Ag, Zn, Pb over significant widths   |
| Shaft 2 (Mt Galena)                                              | Galena, Chalcopyrite                    | Zn, Ag, Cu                | Never drilled                                                                         |
| Shaft 3 (Mt Galena)                                              | Galena, Sphalerite                      | Pb, Ag, Zn                | Never drilled                                                                         |
| Shaft 4 (Castlereagh)                                            | Galena, Sphalerite                      | Pb, Ag, Zn                | Never drilled                                                                         |
| Shaft 5 (Castlereagh)                                            | Galena, Sphalerite, Chalcopyrite        | Pb, Ag, Zn, Cu            | Never drilled                                                                         |
| Shaft 6 (Castlereagh)                                            | Galena, Sphalerite, Chalcopyrite        | Pb, Ag, Zn, Cu            | Never drilled                                                                         |
| Shaft 7 (Castlereagh)                                            | Galena, Sphalerite, Chalcopyrite        | Pb, Ag, Zn, Cu            | Never drilled                                                                         |
| Barton's Open Cut                                                | Galena                                  | Pb, Ag                    | Never drilled                                                                         |
| Lucky Lucy                                                       | Galena, Chalcopyrite                    | Zn, Ag, Cu                | Never drilled                                                                         |
| Lucky Lucy North                                                 | Galena, Sphalerite, Chalcopyrite        | Pb, Ag, Zn, Cu, Au        | LDR Phase I drilling intersects high-grade Ag, Zn, Pb, Cu, Au over significant widths |
| <b>New prospect 2km south of Shaft 1 (Web Consol main shaft)</b> | <b>Galena, Sphalerite, Chalcopyrite</b> | <b>Pb, Ag, Zn, Cu, Au</b> | <b>Never drilled</b>                                                                  |

**Figure 1:** Webbs Consol Project – Phase I Drill Targets

**Figure 2:** Cross Section of Webbs Consol main shaft prospect with drill holes WCS006 & WCS007 mineralised intercepts. Historical reports state that the Webbs Consol mineralised structure strikes 190° and dips 70-75° east.

Historical reports indicate a vertical gradational zoning of mineralisation. The upper zones are believed to be richer in argentiferous galena with minor sphalerite grade and grades to a more dominant argentiferous sphalerite with minor galena at depth. It is not known if this gradation occurs at the same level in all mineral occurrences.

Furthermore, recent work indicates that there are two styles types of mineralisation present at the Webbs Consol Silver-Base Metals Project: i) mineral emplacement through vein fillings typically found north of the Webbs Consol main shaft prospect, and ii) mineral segregation typically found in mineral occurrences in and south of the Webbs Consol main shaft prospect.

Recently completed Phase I drilling returned the following highly significant intercepts<sup>1,2,3,4</sup>:

#### Webbs Consol main shaft prospect

- WCS006<sup>1</sup>: **27.50m @ 468 g/t silver eq<sup>2</sup> or 9.60 % zinc eq<sup>2</sup>**  
(118 g/t silver, 6.52% zinc and 0.77% lead) from 104.60m  
**-incl. 23.80m @ 526 g/t silver eq or 10.79 % zinc eq**  
(135 g/t silver, 7.32% zinc and 0.82 % lead) from 105.60m  
**-incl. 4.40m @ 801 g/t silver eq or 16.43 % zinc eq**  
(287 g/t silver, 9.39% zinc and 1.47 % lead) from 105.60m
- WCS007<sup>1</sup>: **24.15m @ 374 g/t silver eq<sup>2</sup> or 7.67 % zinc eq<sup>2</sup>**  
(63 g/t silver, 5.96% zinc and 0.49% lead) from 122.90m  
**-incl. 19.0m @ 462 g/t silver eq or 9.47 % zinc eq**  
(78 g/t silver, 7.45% zinc and 0.49% lead) from 129.70m  
**-incl. 10.30m @ 675 g/t silver eq or 13.85 % zinc eq**  
(123 g/t silver, 10.82% zinc and 0.56% lead) from 129.70m

#### Lucky Lucy North prospect

- WCS008: **6.70m @ 80 g/t silver eq<sup>2</sup>**  
(31 g/t silver and 0.62 g/t gold) from 35.30m
- WCS008: **5.50m @ 75 g/t silver eq<sup>2</sup> or 1.54 % zinc eq<sup>2</sup>**  
(21 g/t silver, 0.72% zinc and 0.26% lead) from 71.50m
- WCS009: **5.30m @ 144 g/t silver eq<sup>2</sup> or 2.96 % zinc eq<sup>2</sup>**  
(82 g/t silver, 0.16% zinc and 0.43% copper) from 70.00m

**Table 2:** Surface sample assays for newly identified prospect located 2km south of Shaft 1 (Web Consol main shaft). Most significant assays highlight in yellow.

| ID   | Easting | Northing | Primary Lithology                                | Ag g/t | Pb %  | Zn %  | Cu % | Au g/t |

A Down Hole Electromagnetic (DHEM) and Fixed Loop Electromagnetic (FLEM) geophysical surveys targeting the most prospective drill holes are planned for May 2022. The aim of this survey is to define sulphide accumulations at depth prior to Phase II drilling.

**Table 3:** Intercept equivalent grades and metal inputs for drill holes WCS006 to WCS009<sup>1,2,3,4</sup>

| incl.         | 70.00    | 75.30  | 5.30         | <b>144</b>                   | <b>2.96</b>              | 82           | 0.16     | 0.07     | 0.43   | 0.09        |

Webbs Consol silver and zinc equivalent grades are based on assumptions:  $AgEq(g/t) = Ag(g/t) + 49 * Zn(\%) + 32 * Pb(\%) + 106 * Cu(\%) + 76 * Au(g/t)$  and  $ZnEq(\%) = Zn(\%) + 0.021 * Ag(g/t) + 0.646 * Pb(\%) + 2.171 * Cu(\%) + 1.566 * Au(g/t)$  calculated from 10 December 2021 spot prices of US\$22/oz silver, US\$3400/t zinc, US\$2290/t lead, US\$9550/t copper, US\$1800/oz gold and metallurgical recoveries of 97.3% silver, 98.7% zinc, 94.7% lead, 96.3% copper and 90.8% gold which is 4<sup>th</sup> stage rougher cumulative recoveries in test work commissioned by Lode and reported in LDR announcement 14 December 2021 titled "High Metal Recoveries in Preliminary Flotation Test work on Webbs Consol Mineralisation". It is Lode's opinion that all the elements included in the metal equivalents calculation have a reasonable potential to be recovered and sold.

The estimated true width of the widest intersections in Webbs Consol main shaft prospect drill holes WCS006 and WCS007 is 14.2 metres and 10.4 metres respectively whereas the estimated true width of Lucky Lucy North prospect drill holes WCS008 and WCS009 are yet to be determined by follow-up on-section drilling.

Preliminary metallurgical test work performed on a composite sample of mineralisation intersected from drill hole WCS007 was recently reported. This has demonstrated very high recoveries of silver, zinc and lead as well as high metal grades in concentrate from a rougher preliminary flotation test and has allowed metal equivalent values to be calculated.

**Table 4:** Metallurgical recoveries – 4 stage rougher flotation recovery results<sup>2</sup>

| Product      | Cumulative Recoveries (%) |             |             |             |             |
|--------------|---------------------------|-------------|-------------|-------------|-------------|
|              | Zn                        | Ag          | Pb          | Cu          | Au          |
| Rghr Con 1   | 80.5                      | 70.9        | 69.2        | 58.6        | 53.1        |

## Webbs Consol Project Overview

Located 16km west-south-west of Emmaville, Webbs Consol was discovered in 1890 with intermittent mining up to the mid-1950s. The Webbs Consol Project (EL8933) contains several small, but high grade, silver-lead-zinc-gold deposits hosted by the Webbs Consol Leucogranite which has intruded the Late Permian Emmaville Volcanics and undifferentiated Early Permian sediments.

Several mine shafts were worked for the high-grade galena and silver content only with high-grade zinc mineralisation discarded. Mineral concentration was via basic Chilean milling techniques and sluicing. Some subsequent rough flotation of galena was carried out with no attempt to recover sphalerite.

Ore mineralogy includes galena, sphalerite, marmatite, arsenopyrite, pyrite, chalcopyrite, minor bismuth, and gold. Chief minerals are generally disseminated but also high grade “bungs” where emplacement is a combination of fracture infilling and country rock replacement. Gangue mineralogy includes quartz, chlorite and sericite with quartz occurring as veins and granular relicts.

Historical sampling shows potential for high grade silver and zinc mineralisation at Webbs Consol. It was reported that 12 samples taken from the lowest level of the main Webbs Consol shaft (“205’ Level” or 60m depth) averaged 210g/t silver, 22.6% zinc and 2.74% lead. Epithermal style mineralisation occurs in ‘en échelon’ vertical pipe like bodies at the intersection of main north-south shear and secondary northeast-southwest fractures. No leaching or secondary enrichment has been identified.

#### **Competent Person's Statement**

The information in this Report that relates to Exploration Results is based on information compiled by Mr Mitchell Tarrant, who is a Member of the Australian Institute of Geoscientists. Mr Tarrant, who is the Project Manager for Lode Resources, has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Tarrant has a beneficial interest as option holder of Lode Resources Ltd and consents to the inclusion in this Report of the matters based on the information in the form and context in which it appears.

## **About Lode Resources**

Lode Resources is an ASX-listed explorer focused on the highly prospective but under-explored New England Fold Belt in north eastern NSW. The Company has assembled a portfolio of brownfield precious and base metal assets characterised by:

- 100% ownership;
- Significant historical geochemistry and/or geophysics;
- Under drilled and/or open-ended mineralisation; and
- Demonstrated high grade mineralisation and/or potential for large mineral occurrences.
