

FOR IMMEDIATE RELEASE

NuSep Launches ProteoIQ V 2.2 at ASMS

Sydney, Australia 10th June 2011 - NuSep (ASX: NSP) Nusep wishes to advise the market that it has launched the ProteoIQ version 2.2 at the American Society of Mass Spectrometry (ASMS) in Denver this week.

ASMS is the premier meeting for Mass Spec practitioners in America. Approximately 10,000 researchers attended the 2011 ASMS conference and the ProteoIQ software was written up as the preferred software in over 14 posters presented at this prestigious meeting. This is the first time that the ProteoIQ software has received such wide ranging support from its customer community and reflects the clear advantage that this software offers.

In addition, NuSep used the ASMS conference to launch its new annual licensing fee for the ProteoIQ software. The annual license reduces the price of the software to below \$5,000 pa eliminating the need for customers to seek capital approval to purchase this software.

Sales of the ProteoIQ software continue to grow.

About NuSep

NuSep (ASX: NSP) is a publicly listed life sciences company that sells products into the global BioSeparations market. NuSep recently acquired BioInquire which developed the ProteoIQ software enabling NuSep to offer a total Proteomics solution from **Fraction to Function**. The company has offices in both Sydney Australia and Atlanta, USA.

With a 30 year heritage in biological separations, NuSep has forged a world class reputation for its innovative yet simple biological separation techniques including the world's first IVF sperm separation device. In short NuSep has redefined the BioSeparations market through innovation and simplification.

NuSep's world renowned research team has developed an extensive portfolio of patented products. In all, NuSep currently manufactures, distributes and sells 55 products to customers in the USA, Europe, Asia and Australia.

NuSep Products:

- **Gels** – NuSep manufactures and sells precast gels including the innovative **nUView** Gels, which can be visualised 2 minutes after use.
- **Separation Instruments** – NuSep has developed two unique biological separation instruments. The ProteomeSep was released in 2009 and can separate biological samples into 8 fractions for use in the proteomic market. The SpermSep separates sperm for fertility treatments such as IVF and is expected to undergo clinical trials later this year.
- **Proteomics Software** – NuSep offers the unique ProteoIQ software for the analysis of complex mass spec samples. This software is also designed to identify bio markers.
- **Biological Products** – NuSep supplies research grade biological products manufactured using its unique separation technologies. These products include human IgG and Albumin.

About SingaPharm

SingaPharm is a Singapore based biotech company that has developed a disposable procedure for the processing of plasma proteins. SingaPharm is currently a wholly owned subsidiary of NuSep Holdings Limited (ASX: NSP). SingaPharm's process is based on the **P**reparative **I**solation by **M**embrane **E**lectrophoresis (PrIME) technology developed by NuSep. PrIME provides disposable modular processing that is 'electronically' driven membrane fractionation.

This process is flexible and modular compared with the large scale inflexible processing facilities of existing fractionators in US and Europe. The process has increased product yield relative to the existing process with increased product safety. The flexible nature of the PrIME technology also provides SingaPharm with access to plasma volumes that previously did not meet the criteria for larger scale processing facilities. Further, SingaPharm's process can produce multiple plasma products in hours compared to days, which is required by the current manufacturers.
