

Data Centres: The Infrastructure That Underpins The Cloud

May 2017

FROST & SULLIVAN

Cloud computing is redefining the way that IT services are accessed and delivered

Source: Frost & Sullivan Analysis

Trends Impacting the data centre market

Applications are increasingly delivered by multiple vendors in the cloud ecosystem

Source: Frost & Sullivan Analysis

Global cloud services currently a \$277 billion market: APAC at \$11.3 billion, but strong growth forecast

Source: Frost & Sullivan Analysis

Applications & workloads moving rapidly to the cloud

Asia Pacific Data Centre Traffic

Public cloud workloads increasingly dominant, as security and latency concerns with public cloud reduce.

40% CAGR increase in public cloud workloads over next 5 years

Data Centre Workloads (Public Cloud)

SaaS is dominant workload, as usage of SaaS for business applications increases rapidly (currently Australia at ~40% compared to US >60%)

Source: Cisco, Frost & Sullivan

Australia still has potential for significantly greater adoption of cloud services

Adoption of paid cloud services for business applications in Australia is ahead of the EU average, but still lags leading adopters such as Scandinavia and USA

Adoption in Australia is accelerating, for example about 40% of small businesses are now using cloud services for core accounting and financials (Xero, MYOB, etc.)

Source: ABS, Eurostat

Outsourced data centre space is growing well ahead of captive

Outsourced DC space has been growing at around 20% over the past 5 years, while the captive data centres are growing at around 3% over the same time period.

However, outsourced space constitutes just 24% of total data centre space, which indicates a sizeable growth opportunity. The opportunity is even larger in APAC, with just 12.1% of total floor space outsourced

Source: Datacenter Dynamics, Frost & Sullivan

Australia leads the way in data centre outsourcing

250,000 sq metres of outsourced data centre capacity in Australia

Estimated at 55% of total available data centre space

6% growth in available space in 2015

Australia is an attractive market for outsourcing due to high power costs, availability of specialist providers

Source: Frost & Sullivan, BroadGroup

Australian data services revenue to exceed \$2 billion by 2021

12.4% CAGR to exceed A\$2 billion by 2021

Fastest growth in managed hosting, but co-location will still grow at over 10% CAGR
