### Further Information

For further information please contact Mart Rampe, Executive Director, on +61 2 4647 9566 or Jim Malone, Chairman, on +61 419 537714.

## HIGHLIGHTS

---

**Apex-lowboy uranium project enhanced. JORC compliant resource of 950,000 lbs and exploration target of 500,000 lbs U<sub>3</sub>O<sub>8</sub> outlined**

---

---

**Airborne survey completed over the Apache Basin, USA uranium project**

---

---

**Joint venture over Mayfield copper-gold project executed with Capital Mining Limited**

---

---

**Tenders for 6 NSW coal areas re-submitted. Strong interest from potential joint venture parties**

---

## **1 CORPORATE**

The Company had previously reported a Memorandum of Understanding with Sinosteel that allowed Sinosteel to earn up to 60% interests in up to three of the uranium exploration licences in the Kyrgyz Republic. Notwithstanding Sinosteel's continued interest, personnel changes and other delays emanating from Sinosteel have resulted in that company's inability to complete a Transaction Agreement within an acceptable timeframe. Consequently the period of exclusivity afforded to Sinosteel has lapsed. Whilst Sinosteel has stated that it is interested in continuing negotiations, Monaro is now free to consider other approaches that have been made to it. Preliminary meetings have been recently held with another Chinese organisation.

The Board of Monaro Mining N.L wish to announce that Mr Warwick Grigor has resigned as a Director of the company, effective immediately. Mr Jim Malone has been appointed Chairman of the company in his place. The Board of Directors wish to thank Mr Grigor for his contribution to the company over the past 3 years.

## **2 EXPLORATION OVERVIEW**

In the USA, exploration activities are centred on the Apache Basin uranium project, where Vale Exploration Canada Inc is carrying the cost of all exploration in return for an interest in the project. Initial work has included an extensive airborne survey.

In addition, desktop studies have enhanced the Apex-Lowboy uranium project located in Nevada, USA.

## **3 NSW COAL PROJECT**

During the March quarter, the NSW Department of Primary Industries (DPI) advised the Company that the tender for a number of NSW coal areas had been re-opened for a brief period of time and invited the Company (and all other applicants) to reevaluate its expressions of interest for the coal areas. The Company subsequently re-submitted several of their expressions of interest and re-lodged the appropriate documentation on the closing date – 16 February, 2009.

The DPI has not yet advised when the results of the tender process are likely to be made.

Several overseas and local enterprises have expressed strong interest in assisting the Company with joint ventures and funding opportunities should the Company be successful in the tender process.

## 4 URANIUM PROJECTS

### 4.1 Overview

During the last quarter, exploration activities commenced on the Apache Basin located in Arizona, USA. This comprised of a comprehensive airborne survey over a number of UCA claim areas. In addition, desktop studies on the Apex uranium orebody were completed, resulting in a favourable re-appraisal of the project.

The location of the USA projects are illustrated in Figure 1.

FIGURE 1: LOCATION OF THE COMPANY'S MAIN PROJECTS IN THE USA

### 4.2 Arizona – USA: Apache Basin (Monaro reducing to 40%)

An airborne gamma spectrometric and magnetometer survey was completed during the last quarter over portions of the Apache Basin Project located in Arizona, USA. The Apache Basin is prospective for Unconformity uranium deposits and is analogous to the Canadian Athabasca Basin, which is a world renowned uranium province. The location of the project area is illustrated in Figure 1.

This exploration work is being funded by Vale Exploration Canada Inc (“VEC”), under the auspices of a letter agreement with Uranium Corporation Arizona LLC (“UCA”), a wholly owned subsidiary of Monaro Mining NL. Under the terms of the agreement, VEC has committed to funding US\$750,000 in exploration programs in the first year and may elect to fund a further US\$2,500,000 over the subsequent two years to earn the option to acquire an undivided 60% participating interest in the Claims. Thereafter, further expenditures will be funded by the parties pro-rata in accordance with their respective participating interests in the Claims. VEC also has the option to acquire an additional 10% participating interest in the Claims if it completes a favorable feasibility study and may elect to earn an interest in any other subsequent claims that may be staked within an “Area of Interest”. UCA is the operator and manager during the first year of the agreement and VEC may elect to be the operator for the subsequent two years. Data from the airborne survey is now being processed and interpreted.

VEC is the North American exploration division of VALE, the world’s second largest mining company by market capitalization with its headquarters in Brazil. VALE reported revenues of US\$33.1 billion and net earnings of US\$11.8 billion for the year ended December 31, 2007. VALE is committed to the pursuit of sustainable growth by operating with respect for the natural environment and being an ethically and socially responsible company.

### **4.3 Nevada – USA: Apex-Lowboy Uranium (Monaro 100%)**

#### **4.3.1 Overview**

The Company completed a detailed review and assessment of the Apex uranium deposit located in Nevada, USA. The Apex Deposit is held by Monaro Mining NL through its 100% owned US subsidiary Uranium Company of Nevada LLC. The results of the assessment included the following:

- An Inferred Mineral Resource of 614,800 tonnes @ 0.07%U<sub>3</sub>O<sub>8</sub> or approximately 950,000 lbs of metal compliant with JORC standards;
- An exploration target of 500,00 tonnes of ore ranging in grade from 0.04% to 0.07%, with a likely average of 0.05% U<sub>3</sub>O<sub>8</sub> was identified adjacent to existing inferred resource;
- An 8,200 metre drilling program is planned to validate findings of the assessment and extend the zone of known mineralisation; and
- The Regional uranium potential was found to be high.

#### **4.3.2 Resource Definition**

The recently completed work has enabled the Apex uranium deposit to be reported as an Inferred Resource that is compliant with JORC reporting requirements. It is believed that this inferred resource could be increased significantly by further exploration along some of the constructed sections, as there are a number of areas where mineralisation was not closed off by past drilling. Potential for an additional 500,000 tonnes of ore within a range of 0.04% to 0.07% U<sub>3</sub>O<sub>8</sub> and with a likely average of 0.05% U<sub>3</sub>O<sub>8</sub> has been identified within close proximity to the inferred resource. It should be noted that in this case, the potential quantity and grade is conceptual in nature, that there is insufficient exploration to define a mineral resource and that it is uncertain if further exploration will result in the determination of a mineral resource.

Uranium mineralisation was first discovered in 1953, and records indicate that 21,039 tons of uranium ore with an average grade of 0.25%U<sub>3</sub>O<sub>8</sub> was shipped between 1954 and 1966 to the Vitro Uranium Company in Salt Lake City, Utah for milling. The Apex mine has however, been closed since 1966. Exploration activities since then have been relatively extensive. The location of all historic drill holes as well as the local geology is indicated in Figure 2 and a typical cross-section is presented in Figure 3.

**FIGURE 2: DRILL HOLE LOCATIONS AND GEOLOGY**

**FIGURE 3: EXAMPLE OF GRADE-BLOCK INTERPRETATION**

Based on the above methodology, the size of the resource was estimated and is outlined in the following table.

| Tonnes Ore | Average Grade | Tonnes $U_3O_8$ | Lbs $U_3O_8$ |
|------------|---------------|-----------------|--------------|
| 614,800    | 0.07%         | 430             | 950,000      |

### **4.3.3 Exploration potential**

#### **Apex Potential**

Based on the current geological interpretation, there is a high potential to increase the resource by another 500,000 tonnes of ore, which could range in grade from between 0.04 to 0.07%  $U_3O_8$ , with a likely target grade of 0.05%  $U_3O_8$ , and containing on average approximately 570,000 lbs of  $U_3O_8$ . This would add to the 950,000lbs  $U_3O_8$  defined as an Inferred Resource. This exploration target was generated by interpretation of the cross-sections, and identifying areas that have been untested by drilling but show strong likelihood of hosting further mineralisation. These include a number of areas where mineralisation was not closed off by the previous drilling and occur laterally from the ore body as well as at depth.

#### **Regional potential**

##### **Apex-Lowboy Region**

The pluton-carbonaceous metasediment contact zone between the Apex and Lowboy uranium deposits is considered to be highly prospective for uranium mineralisation. In particular, embayments within the quartz-monzonite of the Austin Pluton and Veatch Quartzite contact zone - particularly those within close proximity to aplite dykes, are considered highly prospective as these areas have both lithostructural and geomorphic elements similar to that present at the Apex Deposit.

##### **Paleochannel Potential**

Potential for the sandstone-hosted or paleochannel-hosted uranium should be investigated within the valleys in the immediate vicinity of Apex and Lowboy. The presence of uranium bearing source rocks within the Toiyabe range such as uraniferous granitoids, metasediments and volcanics as well as the presence of known deposits makes the adjoining sedimentary basins highly prospective as hosts to sediment hosted uranium mineralisation. The proposed model would be for an interface between oxidised and reduced sediments which would trap the uraniferous ground waters coming from the Toiyabe range.

##### **Basin Scale**

More regionally, the potential for high grade, uranium deposits similar to those found in the Athabasca Basin of Canada or the Northern Territory of Australia also exists within the region. This type of mineralisation usually occurs in a basinal environment, where the host is a structure or a graphitic/carbonaceous body within the basement, overlain unconformably by sequences of Proterozoic age. The uranium (and at times gold and rare earth metals) is introduced either by leaching of the overlying material and emplaced within the graphitic body, or alternatively by a hydrothermal process within the basement rocks and associated with felsic intrusive and faulting. Mineral alteration of the surrounding rocks is ubiquitous and can be used as a vector to target the location of blind deposits.

## **4.4 New Mexico – USA: Rio Puerco Uranium (Monaro 100%)**

Review of the data base for the Rio Puerco Mine and surroundings continued during the quarter. This project is located within the Grants Mineral Belt, which in the past has produced approximately 340M lbs of uranium. The location of this project in a regional sense is illustrated in Figure 4.

**FIGURE 4: LOCATION OF THE RIO PUERCO PROJECT WITHIN THE GRANTS MINERAL BELT**

The Company's tenements covering the Rio Puerco Project and immediate surrounds are illustrated in Figure 5 and is indicative of the prospective nature of this part of the Grants Mineral Belt.

**FIGURE 5: LOCATION OF RIO PUERCO PROJECT WITHIN THE GRANTS MINERAL BELT**

The next stage of work will entail the processing of well over 1000 drill holes into a format that will enable mine modelling to be carried out. This work is expected to commence in the coming quarter.

#### 4.5 Kyrgyz Projects (Monaro 100%)

During the Quarter, no exploration activities were undertaken. On an administrative level, four of the main projects in Kyrgyz have now been covered with new licences which have been issued in the name of two new wholly owned Kyrgyz entities. Details are as follows:

|                           |           |                                        |                    |
|---------------------------|-----------|----------------------------------------|--------------------|
| Sumara Operating Company: | Kordumdy  | Licence No 2170MP (old Aramsu licence) | 756km <sup>2</sup> |
|                           | Shekaftar | Licence No 2171MP (old Sumsar licence) | 280km <sup>2</sup> |
| Fergana Uranium Company:  | Shing     | Licence No 2172MP (old Naryn licence)  | 566km <sup>2</sup> |
|                           | Madigen   | Licence No 2173MP (old Sogul licence)  | 632km <sup>2</sup> |

The purpose of the above strategy is to facilitate the potential for joint venture opportunities.

#### 4.6 Northern Territory (earning up to 75%)

No exploration activities were undertaken during the quarter on these tenements (Figure 6). The Fog Bay tenements were reduced by 50% as required by licence conditions. However, the reduction did not result in the loss of any prospective areas. Previous work by Hapsburg Exploration Pty Ltd has outlined a number of semi-coincident radiometric and magnetic anomalies, which are now ready to be drill tested. The Liverpool 1 and 2 tenements are currently subject to standard native title processing requirements.

**FIGURE 6: LOCATION OF NORTHERN TERRITORY URANIUM TENEMENTS**

## 5 GOLD & BASE METAL PROJECTS - AUSTRALIA

Subsequent to the reporting period, a joint venture agreement has been executed between the Company and Capital Mining Limited (Capital) regarding the Mayfield copper-gold project located in central NSW. Capital has agreed to spend \$100K to earn 51% and then another \$100K to increase its interest to 75%. At the 51% and 75% level, the Company has the option of contributing prorata if it so desires. A minority interest in the project (currently 5%) held by Robertsconsulting will be diluted in step with Monaro's interest.

Capital is a small ASX listed company with an exploration and development focus on NSW projects. Details regarding this Company can be found at [www.capitalmining.com.au](http://www.capitalmining.com.au).

No exploration activities were conducted on any of the Company's gold and base metal projects located in NSW during the quarter.

Mart Rampe  
**Executive Director**

### COMPETENT PERSON

*The review of exploration activities and results contained in this report is based on information compiled by **Mr Mart Rampe**, a Member of the Australasian Institute of Mining and Metallurgy and who is an Executive Director of the Company. He has sufficient experience which is relevant to the style of mineralisation and types of deposits under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the December 2004 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code). Mart Rampe consents to the inclusion of this information in the form and context in which it appears in this report.*

## APPENDIX 5B

### Mining exploration entity quarterly report

Date: 29 April 2009

Company Secretary

Print name: Anne Adaley

## Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.
- 3 **Issued and quoted securities.** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 1022: Accounting for Extractive Industries* and *AASB 1026: Statement of Cash Flows* applies to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.

## CORPORATE INFORMATION
