ASX: OM1

ASX RELEASE | 16 JANUARY 2026

EXPLORATION UPDATE

Omnia Metals Group Ltd ("**Omnia**" or the "**Company**") (ASX: OM1) provides an update on exploration activities and forward work programs across its Ord Basin Project in the East Kimberley and its Salt Creek Project in the Goldfields of Western Australia.

OMNIA METALS EXECUTIVE CHAIRMAN, PATRICK GLOVAC, SAID:

"Our focus is on methodically advancing both the Ord Basin and Salt Creek projects through disciplined, data-driven exploration. The planned VTEM survey at Ord Basin represents the next logical step in refining subsurface targets identified from earlier geophysical and geochemical work, while the outcomes at Salt Creek continue to improve our geological understanding and help prioritise future drill programs. We remain committed to deploying capital efficiently and progressing our projects in a measured and technically robust manner."

ORD BASIN PROJECT – VTEM SURVEY PLANNING

Omnia is currently planning a follow-up airborne VTEM (Versatile Time Domain Electromagnetic) survey at its Ord Basin Project, designed to refine and prioritise subsurface conductive targets for future drill testing.

The planned VTEM survey builds on the Company's extensive exploration dataset, including:

- High-grade copper-silver rock chip results from the Caves Prospect, including assays of up to 10.3% Cu and 29 g/t Ag[1].
- A maiden airborne gravity survey completed at the Junction Prospect, which identified a structurally complex transfer-zone architecture and multiple gravity anomalies coincident with historical EM conductors[2].
- Subsequent reconnaissance mapping, sampling and soil geochemistry programs that further highlighted prospective structural corridors and geochemical anomalies across both the Northern and Southern Exploration Targets[3].

The Company is currently securing a suitable geophysics contractor and optimal seasonal access window to complete the VTEM survey. Timing will be finalised subject to contractor availability, weather conditions and logistical considerations in the Kimberley region.

The results of the VTEM survey are expected to provide higher-resolution targeting data to assist with defining priority drill targets beneath cover.

[3] OM1 ASX announcements - 27 October 2022 and 11 December 2024

SALT CREEK PROJECT – GOLDFIELDS, WESTERN AUSTRALIA

At the Salt Creek Project, Omnia continues to advance its understanding of gold and base-metal prospectivity following recent drilling and geophysical work.

The Company completed a 941m slim-line RC drilling program targeting high-priority gold and copper targets generated from gravity and magnetic datasets[4]. While assay results from this initial first-pass program returned low metal tenor, the drilling provided valuable geological, lithogeochemical and structural information across a largely untested project area.

The Salt Creek Project remains highly prospective, with exploration targets supported by:

- Independent interpretation of gravity and magnetic datasets[5];
- Anomalous geochemical trends and structural corridors identified beneath transported cover; and
- The scale of the tenement package in a proven mineralised region of the Goldfields.

The Company is using the results from the completed drilling to refine its geological model and prioritise targets for future follow-up work.

PLANNED EXPLORATION PROGRAMS

Across both projects, Omnia is planning a staged and disciplined exploration program focused on:

- Completion of the VTEM survey at the Ord Basin Project, followed by integrated interpretation with existing gravity, EM, geochemistry and mapping datasets;
- Further refinement of priority drill targets at Salt Creek based on combined geophysical and drilling outcomes;
- Ongoing geological review, target ranking and program design to ensure efficient capital deployment; and
- Advancement of exploration programs subject to approvals, seasonal access and contractor availability.

The Company remains committed to systematic, technically driven exploration across its portfolio and will continue to update the market as key milestones are achieved.

STRATEGIC OUTLOOK

Omnia has narrowed it focus to securing antimony, silver and rare earth element (“**REE**”) projects within the United States, where demand for critical minerals continues to grow. This strategy is designed to strengthen Omnia’s exposure to key growth sectors, diversify its project base, and position the Company to capitalise on future developments in the global energy and technology transition.

- ENDS -

This announcement is approved for release by the Board of Omnia Metals Group Ltd.

ABOUT OMNIA METALS GROUP

Omnia Metals Group Ltd (ASX:OM1) goal is to become a leader in the exploration, and development, of future facing commodities used in advanced technologies and essential to the global energy transition.

FORWARD LOOKING STATEMENTS

Statements contained in this release, particularly those regarding possible or assumed future performance, costs, dividends, production levels or rates, prices, resources, reserves or potential growth of Omnia Metals Group Ltd, are, or may be, forward looking statements.

Such statements relate to future events and expectations and, as such, involve known and unknown risks and uncertainties. Actual results and developments may differ materially from those expressed or implied by these forward-looking statements depending on a variety of factors.

ASX LISTING RULE 5.23 STATEMENT

The information in this announcement that relates to exploration results is extracted from, or based upon, the Company's previously released ASX announcements, including but not limited to:

- *High Grade Rock Chip Samples at Ord Basin Project* - 30 March 2022
- *Geophysics Contractor Secured for Ord Basin Project* - 23 May 2022
- *Maiden Gravity Survey Completed at the Junction Prospect* - 10 August 2022
- *Exploration Update for Ord Basin & Salt Creek Projects* - 27 October 2022
- *Exploration Update across Multi-Commodity Portfolio* - 26 July 2024
- Exploration Update - Ord Basin Project - 11 December 2024
- *Gold RC Drill Program Completes at Salt Creek* - 18 July 2025
- *Salt Creek Drilling Results and Project Update* - 13 October 2025

The Company confirms that it is not aware of any new information or data that materially affects the information included in those announcements, and that all material assumptions and technical parameters underpinning the exploration results continue to apply and have not materially changed.

This announcement does not include any new exploration results, mineral resources or ore reserves and is provided as an update on planning, sequencing and future exploration activities.
