Objective:	Primary target: Dongara Sandstone Proposed total depth: 2,505 metres
Progress and Status:	The well spudded on 23 April 2004. 244 mm surface casing was set at 501 metres. Current total depth is 2,400 metres. Progress for the week was 1,892 metres. At 0600 hours WST today the operation was running in hole with the coring assembly. It is intended to fully core the Dongara Sandstone and Wagina Formation reservoirs prior to drilling to total depth and running wireline logs. Preliminary correlations suggest that the well will intersect the primary reservoir target some 14 metres updip from Jingemia 1.
