

Voyager Energy Limited

News Release 28 June 2005

JINGEMIA OIL FIELD PRODUCTION UPDATE (Voyager 11%)

Voyager Energy Limited has been advised by the L14 (Jingemia) Production Licence Operator, Origin Energy Developments Pty Limited, that the Jingemia-4 production well has as anticipated stopped producing under natural flow and artificial lift facilities are currently being installed. It is expected that a jet pump will be in operation shortly and although higher rates may ultimately be achieved, Jingemia-4 is expected by the Operator to initially produce at rates of approximately 1,000 bopd while on pump.

Additional development drilling activity at Jingemia by the L14 joint venture is scheduled with ODE Rig 16 following completion of the Tarantula-1 sidetrack well which commenced on 25 June in the L11 licence in the Perth Basin. The rig should be available to the L14 joint venture in early August to begin drilling Jingemia-5 and Jingemia-6. After subsequent tie-in of these wells to the field facilities, oil production rates in L14 are expected to return to over 4,500 bopd.

Participants in EP 413/L14 are:

Origin Energy Developments Pty Limited (Operator)	49.189%
ARC Energy Limited	33.141%
Voyager (PB) Limited	11.000%
Victoria Petroleum Offshore Pty Ltd	5.000%
Norwest Energy	1.278%
Roc Oil (WA) Pty Limited	0.250%
J Geary	0.142%
