Report Confirms Citrofresh to be Effective Against H5N2 Avian Influenza Virus

Citrofresh International Ltd has received confirmation of the efficacy of Citrofresh against Avian Influenza. A report completed by The Onderstepoort Veterinary Institute (OVI) of South Africa, has shown Citrofresh to be effective against the virulent H5N2 strain of Avian Influenza Virus.

The result showed that Citrofresh effected a greater than 3 log reduction of the virus at 4 & 6% dilutions. In the opinion of Mr. Zoltan Nack – Senior Scientist and Microbiologist - Analytical Microlabs, a 2% dilution of Citrofresh would also achieve a >3 log reduction of the virus. This is based on the virology testing undertaken by The Australian Rickettsial Reference Laboratory with Citrofresh on other viruses like HSV-1, HSV-2 and Herpes zoster. This result is extremely impressive in that it is the first known **organic** and non-toxic product in the world to achieve such a result.

The OVI is a division of the South African Agricultural Research Council (ARC), a semi-autonomous body created to improve the efficiency of research and other services rendered to the agricultural community. The study and report was completed by the OVI virology department which researches epidemiological aspects of viral diseases of Africa.

Avian Influenza H5N2, is one of the most virulent strains of Orthomyxoviridae viruses and is as virulent as H5N1. A major concern of Governments worldwide is that it may become dangerous to humans due to its mutation. There is a possibility that some cases of human mortality have already occurred in Asian countries therefore the fear of an outbreak or epidemic is not without just concern.

With this verification, the company will now commence benchmarking its product against the current leading chemical disinfectants used in the important emergency animal disease control and bio-security market. Being non-toxic, non-corrosive, non-carcinogenic, non-mutagenic, non-teratogenic and non-neurotoxic, Citrofresh can now offer further significant advantages to its global customers and markets. Citrofresh is the only certified organic disinfectant breaking such ground and is completely safe to humans, animals and the environment.
