DISCLAIMER

This presentation has been prepared by Recce Pharmaceuticals Ltd (the "Company"). It does not purport to contain all the information that a prospective investor may require in connection with any potential investment in the Company. You should not treat the contents of this presentation, or any information provided in connection with it, as financial advice, financial product advice or advice relating to legal, taxation or investment matters.

No representation or warranty (whether express or implied) is made by the Company or any of its officers, advisers, agents or employees as to the accuracy, completeness or reasonableness of the information, statements, opinions or matters (express or implied) arising out of, contained in or derived from this presentation or provided in connection with it, or any omission from this presentation, nor as to the attainability of any estimates, forecasts or projections set out in this presentation.

This presentation is provided expressly on the basis that you will carry out your own independent inquiries into the matters contained in the presentation and make your own independent decisions about the affairs, financial position or prospects of the Company. The Company reserves the right to update, amend or supplement the information at any time in its absolute discretion (without incurring any obligation to do so).

Neither the Company, nor its related bodies corporate, officers, their advisers, agents and employees accept any responsibility or liability to you or to any other person or entity arising out of this presentation including pursuant to the general law (whether for negligence, under statute or otherwise), or under the Australian Securities and Investments Commission Act 2001, Corporations Act 2001, Competition and Consumer Act 2010 or any corresponding provision of any Australian state or territory legislation (or the law of any similar legislation in any other jurisdiction), or similar provision under any applicable law. Any such responsibility or liability is, to the maximum extent permitted by law, expressly disclaimed and excluded. Nothing in this material should be construed as either an offer to sell or a solicitation of an offer to buy or sell securities. It does not include all available information and should not be used in isolation as a basis to invest in the Company.

FUTURE MATTERS

This presentation contains reference to certain intentions, expectations, future plans, strategy and prospects of the Company.

Those intentions, expectations, future plans, strategy and prospects may or may not be achieved. They are based on certain assumptions, which may not be met or on which views may differ and may be affected by known and unknown risks. The performance and operations of the Company may be influenced by a number of factors, many of which are outside the control of the Company. No representation or warranty, express or implied, is made by the Company, or any of its directors, officers, employees, advisers or agents that any intentions, expectations or plans will be achieved either totally or partially or that any particular rate of return will be achieved.

Given the risks and uncertainties that may cause the Company's actual future results, performance or achievements to be materially different from those expected, planned or intended, recipients should not place undue reliance on these intentions, expectations, future plans, strategy and prospects. The Company does not warrant or represent that the actual results, performance or achievements will be as expected, planned or intended.

US DISCLOSURE

This document does not constitute any part of any offer to sell, or the solicitation of an offer to buy, any securities in the United States or to, or for the account or benefit of any "US person" as defined in Regulation S under the US Securities Act of 1993 ("Securities Act"). The Company's shares have not been, and will not be, registered under the Securities Act or the securities laws of any state or other jurisdiction of the United States, and may not be offered or sold in the United States or to any US person without being so registered or pursuant to an exemption from registration including an exemption for qualified institutional buyers.

About Recce Pharmaceuticals Ltd

- ▶ Founded in 2008
- ▶ Publicly listed on ASX 2016 (ASX:RCE)
- ▶ Whole new class of antibiotic
- ▶ RECCE® 327 – broad spectrum antibiotic for sepsis
- ▶ Qualified Infectious Disease Product (QIDP) designation
RECCE® 327 labelled under GAIN Act for:
 - 10 years market exclusivity (post approval)
 - Fast track (life of regulatory process)
- ▶ Patented manufacturing to Phase I & II volumes
- ▶ In discussion with US Food & Drug Administration

*Recce is a drug
discovery and
development business,
commercialising a new
class of synthetic
antibiotics to address the
global health challenge of
antibiotic resistant
superbugs.*

Recce Pharmaceuticals Ltd - Capital structure

Major shareholders 31 March 2018

1. G. & O. Melrose*	35.0%
2. Foord Asset Management	5.2%
3. J. Graham*	4.1%
4. M. Dilizia*	3.3%
5. State One Equities	2.9%

ASX:RCE 6 months

* Held by Executive Directors

Snapshot

ASX code	RCE
Shares on issue	89.34 million
Share price	AUD 19 cents
Market Cap (approx.)	USD \$12.1 million
Cash and deposits 30 June 2018	USD \$0.5 million
Trading range 52 week	AUD 14-26.0 cents
Average daily volume 3 months	84.4K

Tackling Superbugs – RECCE® 327 (Video)

Sepsis – it's a big problem!

- ▶ Sepsis is a life threatening inflammatory response to infection that has spread in the body
- ▶ Leading cause of death in intensive care units and top 10 cause of mortality worldwide
- ▶ Two per cent of hospitalisations are for sepsis but they make up 17% of in hospital deaths
- ▶ Care is improving but the incidence of severe sepsis is increasing rapidly
- ▶ **Most expensive condition to treat** - double the average cost per stay across all other conditions
- ▶ **Currently no drug therapies specifically for the treatment of sepsis**
- ▶ Desperate and unmet medical need for new safe and efficacious products

Natural antibiotics vs synthetic antibiotics

- ▶ Overuse of antibiotics has led to antibiotic resistant bacteria in humans and animals (superbugs)
- ▶ Antibiotic resistance is widely acknowledged as an urgent global health issue
- ▶ Commercial antibiotics are naturally derived – superbugs have been forming for millennia – and will continue to do so!
- ▶ RECCE® 327 is a new class of broad-spectrum antibiotic
 - Entirely man-made and designed with purpose – not reliant on what's found in nature.
 - Unique mechanism of action – many 'Active-sites', as opposed to the traditional (natural) antibiotics 'few'.
 - Universal mechanism of action - detailed experimentation demonstrates it does not succumb to superbugs.

Pre-formed
natural superbugs

Contain natural antibiotics

NO Pre-formed
natural superbugs

Synthetic antibiotics

Independent study* example treating sepsis

- ▶ Three groups of 10 mice were each infected with MRSA (*S.aureus* superbug)
- ▶ All ten mice treated with RECCE[®] antibiotic survived
- ▶ Nine mice treated with current antibiotic (Oxacillin) survived
- ▶ Four mice that had no treatment at all, survived

Note: Oxacillin was chosen for its known activity against MRSA. It is however a 'narrow-spectrum' antibiotic. In a clinical context, where diagnostics cannot immediately determine bacterial type, use in combatting any number of other bacteria, may likely see a less favorable patient outcome...

RECCE[®] 327, with its proven 'broad-spectrum' activity, has shown strength against a range of bacteria including superbug forms, delivering rapid kill of deadly germs.

Number of Mice that survived
Sepsis from *S. aureus* (superbug)

RECCE® 327 – how it works (in more detail)

- ▶ RECCE® antibiotics, attracted by protein in a bacteria's outer membrane, non-specifically attach through hydrophobic interaction
- ▶ Weakening the outer cell wall, internal pressure causes the bacteria to burst and lose viability
- ▶ Outer protein can mutate as much as it likes (superbug) - RECCE® antibiotic will still kill it!

RECCE® 327 mechanism of action in practice

00:00 minutes

Before application
of RECCE® 327,
the *E.coli* bacteria
cells are healthy,
smooth and intact

RECCE® 327 mechanism of action in practice

20 minutes

After application of RECCE® 327, the *E.coli* bacteria cell membrane begins to weaken and is disrupted

RECCE® 327 mechanism of action in practice

180 minutes

E. coli bacteria
cells (10e6 cfu/ml)
having their outer
membrane weakened
– and bursting from
treatment with
RECCE® 327 (1000
ppm)

RECCE® 327 – Safety and Efficacy (detail)

Efficacy

- Performs as a broad spectrum antibiotic
- Acts against bacteria in both normal and mutated superbug forms
- Multiple tests demonstrate efficacy against Gram-positive and Gram-negative *S.aureus* and *E.coli* including superbug forms
- Rate and MIC/MIK data demonstrates potency and broad spectrum activity against a range of bacteria
- Contains a patented polymeric structure, intentionally designed to overcome the traditional challenges of bacterial mutation/resistance
- *In-vivo* (mice) study against influenza virus

Safety

- Multiple studies of toxicity in small and large animals
- Multiple tests of mutagenicity (cancer) are clear
- Numerous studies to date indicate the safety of RECCE® 327
- Is suited to administration against sepsis by intra-venous drip
- Indicates a safe therapeutic dosing window

What is Qualified Infectious Disease Product?

- ▶ Legal status awarded under *US Generating Antibiotic Incentives Now (GAIN) Act*
- ▶ Labeled for **fast track designation** – speed the FDA's review process
- ▶ **10 years market exclusivity**, starting from the date of New Drug Application approval if RECCE® 327 completes the necessary clinical trials and is approved by the FDA
- ▶ QIDP designated drugs to treat serious or life-threatening conditions and fill an unmet medical need, are labeled for expedited review in order to facilitate their development

Qualified Infectious Disease Product (QIDP) designation is awarded if FDA considers the drug to treat “*serious or life-threatening infections, including those caused by an antibacterial or antifungal resistant pathogen.*”

Patents and trademarks

Patent portfolio covers all key geographies, manufacturing and modes of use

Filed	Patent Family 1 <u>Granted</u>	Expiry	Patent Family 2/3	Expiry	Trademarks registered

Patent Family 1 – granted

Unique and highly economical manufacturing process

Patent Family 2 – pending

Applications (Multi-drug delivery)

Patent Family 3 – pending

Anti-viral uses

Trademarks

RECCE® for use on pharmaceutical products and services

Manufacturing and production

- ▶ Wholly owned automated manufacturing facility in Sydney's Macquarie Park
- ▶ Raw materials plentiful and CHEAP - few \$/kilogram
- ▶ Automated manufacture process taking around 1¼ hours
- ▶ No expensive waste – 99.9% product yield
- ▶ Currently producing in volumes to support planned Phase I and Phase II clinical trials
- ▶ Facility built to pharmaceutical specification

Principal Engineer Arthur Kollaras & Executive Chairman/Chief Research Officer Dr Graham Melrose assess finished product

The Clinical Pathway to Antibiotic Approval

- ▶ Three distinct phases of clinical evaluation prior to approval for new drugs
- ▶ Multiple legislative and regulatory initiatives available to a new antibiotic developer
 - Facilitates and expedite drug development and review
 - Potential time/cost opportunities available along the way
- ▶ Medical observation is simple
 - Fast acting, highly symptomatic nature
- ▶ Patient outcomes are obvious and associated development costs to reach reg. approval may be less

Board and management structure

Dr Graham Melrose – President & CRO

BSc (Hons), PhD (UWA), MBA (Macq), FRACI, C Chem, FAICD

Founder and inventor. Former Executive Director and Chief Research at Johnson & Johnson (Aust) Pty Ltd in Sydney, with global responsibilities, particularly in Asia-Pacific

Michele Dilizia – Vice President

BSc (Med Sci), Grad Dip Bus (Mkting), BA (Journ), GAICD, MASM

Co-inventor and qualified medical scientist; specialisation in medical microbiology and regulatory affairs

James Graham – Vice President

BCom (Entrepreneurship), GAICD

Extensive experience in marketing, business development and commercialisation of early stage technologies with global potential

Dr John Prendergast – Non-Executive Vice President

BSc (Hons), MSc (UNSW), PhD (UNSW), CSS (HU)

US based, current Chairman and Co-founder of Palatin Technologies, Inc. (NYSE: PTN) and Lead Director of Heat Biologics, Inc. (NASDAQ: HTBX) – extensive experience in the international commercialisation of pharmaceutical technologies

Alistair McKeough – Company Secretary (Outsourced - Whittens & McKeough)

Alistair is a qualified lawyer and Principal/Managing Director of McKeough & Whittens, Alistair has broad experience as a commercial litigator and Company Secretary to ASX Listed companies

Justin Reynolds – CFO (Outsourced - Pitcher Partners Sydney)

Justin is a qualified accountant and Partner of Pitcher Partners Sydney, Justin has broad experience covering all areas of accounting, taxation and assurance. Particularly, Justin's areas of expertise are business services and outsourced accounting

Arthur Kollaras – Principal Engineer

BSc Beng (Chem), PhilEng (Enviro), MIEAust, MISPE

Highly qualified in chemical engineering and microbiology, has significant experience taking a new technology concept to pilot plant and full scale FDA standards and production internationally

Dr Justin Ward – Principal Quality Chemist

BSc (Chem), PhD (Chem), MRACI, CChem

A quality control expert who has worked with leading pharmaceutical companies, he is bringing Recce's research and development, and manufacturing up to US FDA requirements

Economics of antibiotic development

A challenged business model – the antibiotic industry:

- Traditionally the more effective an antibiotic, the less likely it is to be used by clinicians who want to 'save it'. Less use – less sales...
- Conventional antibiotics commonly suffer resistance quickly; investment in 'new' drug candidates a risk ROI
- Pharmco's cutting antibiotic R&D – yet market need has never been greater

How might one 'unlock' the anti-infectives industry?

- A new class of antibiotics – having a unique mechanism of action that DOES NOT lose effectiveness with 'bacterial mutation' – superbugs – even with repeated use
- Broad spectrum capabilities against ALL deadly bacteria, Gr +/- and superbugs
- A drug that can be administered quickly, without impractical diagnostic delays, where clinical 'guess-work' could be a thing of the past!

Indications suggest RECCE® 327 may just be this needed change

US Legislative Support of Antibiotic Development

- ▶ US *Right-to-Try Act* passed in May/June 2018
- ▶ **Designed to give US patients with life threatening diseases, immediate and direct access to potentially lifesaving drugs** - that have completed Phase I clinical trials
- ▶ New legislation mitigates possibility of weeks of procedural delay - Previous legislation termed Compassionate Use
- ▶ **Potentially resulting in improved patient outcomes**
 - With reduced risk to those providing them
 - Potential to build earlier ‘direct’ distribution – diluting late-stage pharma market access model
- ▶ Further evidence of evolving regulatory environment in the US - Largest antibiotic market in the world
- ▶ Potential aimed at **expediting new drugs with lifesaving potential**
- ▶ Legislation does not affect Company’s business at present

Global market interest in antibiotic resistant treatments – M&A activity

Date	Company	Acquired/merger/ acquisition by	Deal value (US\$)	Phase acquired	Detail
Dec-14	Cubist	Merck	\$8.4bn	Ph III	Antibiotics - one marketed - Cubicin for G-pos \$625m (revenue in 2010, over \$1bn in 2013) – mostly MRSA
Aug-16	Astra Zeneca (antibiotics)	Pfizer Inc	\$1.5bn	Ph II-NDA	Late-stage small molecule antibiotics business – most markets outside the US only
Jan-15	Meiji Seika Pharma & Fedora	Roche	Up to \$750m	Ph I	Beta-lactamase inhibitor (ex. Japan)
Oct-17	Warp Drive Bio	Roche	Up to \$387m	Device	Potential natural antibiotic identification technology
Dec-17	Summit Therapeutics	Eurofarma	Up to \$27m	Ph II	Clostridium difficile infection (Latin America only)
May-16	Vertex Pharma	Spero Therapeutics	Not disclosed	Ph I	Bacterial infections
Jan-18	Prokaryotics	Merck	Not disclosed	Preclinical	Bacterial cell envelope enzymes
Mar-18	Redx Pharma	Deinove	Not disclosed	Preclinical	Gram-negative bacteria

RECCE® antibiotics – a technology

Recce's technology enjoys the added opportunity of multiple markets and product categories.

Current RECCE® 327 development program

Estimated timelines/indications are subject to changes in development plans and regulatory requirements/clarifications

NDA - New Drug Application

MAA - Marketing Authorisation Application

Investment summary

Qualified Infectious Disease
Product Designation (QIDP)

Generating Antibiotics Now
(GAIN) Act approved

Proprietary technology as a
new class of antibiotics

Lead compound addressing
the most expensive condition
faced by hospitals worldwide

Early commercialisation
potential

Initial focus on sepsis-
potentially the first treatment
for sepsis

Favourable legislative and
financial landscape

Experienced commercial
management and board

Creating value by meeting
key milestones

Established manufacturing
(volumes suitable for Ph I/II)

Thank you
