

ASX Announcement

Recce Meets Antibiotic Leaders to Explore Commercial and Clinical Opportunities

Sydney, Australia, 25 October 2018: Recce Pharmaceuticals Ltd (ASX: RCE), the company developing a new class of synthetic antibiotics, today announced it will be represented at the World Anti-Microbial Resistance Congress in Washington D.C., 25 - 26 October 2018.

The conference features 150 speakers from 20 countries and is a leading international forum for researchers, investors, businesses and governments working to address antibiotic resistance.

Recce Executive Chairman Dr Graham Melrose said, "There is growing international interest in our new class of broad-spectrum synthetic antibiotic technology. With a range of meetings secured, this event allows us to efficiently engage with potential business and clinical partners to discuss commercial and clinical opportunities as we advance towards the start of human clinical trials".

Recce's lead compound, RECCE® 327, is being developed as a new class of antibiotic, for the treatment of blood infections and sepsis derived from *E. coli* and *S. aureus* bacteria – including their superbug forms. It was awarded Qualified Infectious Disease Product (QIDP) designation in late-2017, as part of the US Generating Antibiotic Incentives Now (GAIN) Act, labelling it for Fast Track Designation, plus 10 years of market exclusivity post approval.

In 2018, the Company successfully secured almost half of its R&D budget from Australian Government funding.

About Recce Pharmaceuticals Ltd

Recce Pharmaceuticals Ltd (ASX: RCE) is pioneering the development and commercialisation of a new class of synthetic antibiotics with broad spectrum activity designed to address the urgent global health problem of antibiotic resistant superbugs. Its patented lead candidate known as RECCE® 327 has been developed for the treatment of blood infections and sepsis derived from *E. coli* and *S. aureus* bacteria – including their superbug forms. Pre-clinical testing in laboratories and animal models, in Australia and overseas has demonstrated positive results. Recce has a manufacturing

DISCLAIMER

This presentation has been prepared by Recce Pharmaceuticals Ltd (the “Company”). It does not purport to contain all the information that a prospective investor may require in connection with any potential investment in the Company. You should not treat the contents of this presentation, or any information provided in connection with it, as financial advice, financial product advice or advice relating to legal, taxation or investment matters.

No representation or warranty (whether express or implied) is made by the Company or any of its officers, advisers, agents or employees as to the accuracy, completeness or reasonableness of the information, statements, opinions or matters (express or implied) arising out of, contained in or derived from this presentation or provided in connection with it, or any omission from this presentation, nor as to the attainability of any estimates, forecasts or projections set out in this presentation.

This presentation is provided expressly on the basis that you will carry out your own independent inquiries into the matters contained in the presentation and make your own independent decisions about the affairs, financial position or prospects of the Company. The Company reserves the right to update, amend or supplement the information at any time in its absolute discretion (without incurring any obligation to do so).

Neither the Company, nor its related bodies corporate, officers, their advisers, agents and employees accept any responsibility or liability to you or to any other person or entity arising out of this presentation including pursuant to the general law (whether for negligence, under statute or otherwise), or under the Australian Securities and Investments Commission Act 2001, Corporations Act 2001, Competition and Consumer Act 2010 or any corresponding provision of any Australian state or territory legislation (or the law of any similar legislation in any other jurisdiction), or similar provision under any applicable law. Any such responsibility or liability is, to the maximum extent permitted by law, expressly disclaimed and excluded. Nothing in this material should be construed as either an offer to sell or a solicitation of an offer to buy or sell securities. It does not include all available information and should not be used in isolation as a basis to invest in the Company.

FUTURE MATTERS

This presentation contains reference to certain intentions, expectations, future plans, strategy and prospects of the Company.

Those intentions, expectations, future plans, strategy and prospects may or may not be achieved. They are based on certain assumptions, which may not be met or on which views may differ and may be affected by known and unknown risks. The performance and operations of the Company may be influenced by a number of factors, many of which are outside the control of the Company. No representation or warranty, express or implied, is made by the Company, or any of its directors, officers, employees, advisers or agents that any intentions, expectations or plans will be achieved either totally or partially or that any particular rate of return will be achieved.

Given the risks and uncertainties that may cause the Company's actual future results, performance or achievements to be materially different from those expected, planned or intended, recipients should not place undue reliance on these intentions, expectations, future plans, strategy and prospects. The Company does not warrant or represent that the actual results, performance or achievements will be as expected, planned or intended.

US DISCLOSURE

This document does not constitute any part of any offer to sell, or the solicitation of an offer to buy, any securities in the United States or to, or for the account or benefit of any “US person” as defined in Regulation S under the US Securities Act of 1933 (“Securities Act”). The Company's shares have not been, and will not be, registered under the Securities Act or the securities laws of any state or other jurisdiction of the United States, and may not be offered or sold in the United States or to any US person without being so registered or pursuant to an exemption from registration including an exemption for qualified institutional buyers.

About Recce Pharmaceuticals Ltd

- ▶ Founded in 2008
- ▶ Publicly listed on ASX 2016 (ASX:RCE)
- ▶ Whole new class of antibiotic that kills bacteria including its superbug form even with continued use
- ▶ RECCE® 327 – broad spectrum antibiotic; lead indication is for sepsis - #1 most expensive condition
- ▶ Qualified Infectious Disease Product (QIDP) designation
RECCE® 327 labelled under GAIN Act for:
 - 10 years market exclusivity (post approval)
 - Fast track (life of regulatory process)
- ▶ Patented manufacturing producing to Phase I & II volumes

Recce is a drug discovery and development business, commercialising a new class of synthetic antibiotics to address the global health challenge of antibiotic resistant superbugs.

Average daily volume 3 months	84.4K

Natural antibiotics vs synthetic antibiotics

- ▶ Overuse of antibiotics has led to antibiotic resistant bacteria in humans and animals (superbugs)
- ▶ Antibiotic resistance is widely acknowledged as an urgent global health issue
- ▶ Commercial antibiotics are naturally derived – superbugs have been forming for millennia – and will continue to do so!
- ▶ RECCE® 327 is a new class of broad-spectrum antibiotic
 - Entirely man-made and designed with purpose – not reliant on what's found in nature.
 - **Unique mechanism of action** – many 'Active-sites', as opposed to the traditional (natural) antibiotics 'few'.
 - Universal mechanism of action - detailed experimentation demonstrates it does not succumb to superbugs.

Pre-formed
natural superbugs

Contain natural antibiotics

NO Pre-formed
natural superbugs

Synthetic antibiotics

RECCE® Antibiotics – Curative study*

- ▶ Three groups of 10 mice were each infected with MRSA (*S. aureus* superbug)
- ▶ All ten mice treated with RECCE® antibiotic survived
- ▶ Nine mice treated with current antibiotic (Oxacillin) survived
- ▶ Four mice that had no treatment at all, survived

Note: Oxacillin was chosen for its known activity against MRSA. It is however a 'narrow-spectrum' antibiotic. In a clinical context, where diagnostics cannot immediately determine bacterial type, use in combatting any number of other bacteria, may likely see a less favorable patient outcome...

RECCE® 327, with its proven 'broad-spectrum' activity, has shown strength against a range of bacteria including superbug forms, delivering rapid kill of deadly germs.

Number of Mice that survived
Sepsis from *S. aureus* (superbug)

RECCE® Antibiotics – Preventative study*

Health scores in mice were maintained:

- ▶ Blue points represent infected mice that received treatment with RECCE® 327
- ▶ Grey points represent no infection
- ▶ Orange points represent infection without treatment *(industry recognised data for MRSA infection)*
- ▶ One group of 10 mice was infected with *S. aureus*
- ▶ Both groups of 10 mice were treated with RECCE® 327 at 132 mg/Kg
- ▶ RECCE® antibiotic in-vivo is at this dose
 - Both antimicrobial-active against *S. aureus* superbug and non-toxic.

Sepsis in Mice
from *S. aureus* (superbug)

RECCE® Antibiotics – Preventative study*

Health scores in mice were maintained:

- ▶ Blue points represent treatment
- ▶ Grey points represent not treated
- ▶ Both groups of mice infected with *S. pyogenes*
 - Only one group treated with RECCE® antibiotics
- ▶ **RECCE® antibiotic in-vivo is antimicrobial active**
- ▶ After the 12 hour-point, *S. pyogenes* germ was cleared naturally from the blood by RECCE® antibiotics
- ▶ No treated animals displayed any significant adverse signs

* Results from an independent laboratory in USA

Sepsis in mice from *S. pyogenes*

RECCE[®] antibiotics kill at practical speeds

Rates of kill of standard bacteria

Rates of kill of Superbugs

RECCE® antibiotics do not Fail¹

Number of repetitive uses before displaying loss of antibiotic activity

¹After repetitive use, the commercial antibiotic loses activity; >25 repeats **RECCE® antibiotic DOES NOT**

RECCE® 327 – how it works (in more detail)

- ▶ RECCE® antibiotics, attracted by protein in a bacteria's outer membrane, non-specifically attach through hydrophobic interaction
- ▶ Weakening the outer cell wall, internal pressure causes the bacteria to burst and lose viability
- ▶ Outer protein can mutate as much as it likes (superbug) - RECCE® antibiotic will still kill it!

RECCE® 327 mechanism of action in practice

00:00 minutes

Before application
of RECCE® 327,
the *E.coli* bacteria
cells are healthy,
smooth and intact

RECCE® 327 mechanism of action in practice

20 minutes

After application of RECCE® 327, the *E.coli* bacteria cell membrane begins to weaken and is disrupted

RECCE® 327 mechanism of action in practice

180 minutes

E. coli bacteria
cells (10e6 cfu/ml)
having their outer
membrane weakened
– and bursting from
treatment with
RECCE® 327 (1000
ppm)

RECCE[®] 327 – Safety and Efficacy (detail)

Efficacy

- Performs as a broad spectrum antibiotic
- Acts against bacteria in both normal and mutated superbug forms
- Multiple tests demonstrate efficacy against Gram-positive and Gram-negative *S.aureus* and *E.coli* including superbug forms
- Rate and MIC/MKC data demonstrates potency and broad spectrum activity against a range of bacteria
- Contains a patented polymeric structure, intentionally designed to overcome the traditional challenges of bacterial mutation/resistance
- *In-vivo* (mice) study against influenza virus

Safety

- Multiple studies of toxicity in small and large animals
- Multiple tests of mutagenicity (cancer) are clear
- Numerous studies to date indicate the safety of RECCE[®] 327
- Is suited to administration against sepsis by intra-venous drip
- Indicates a safe therapeutic dosing window

What is Qualified Infectious Disease Product?

- ▶ Legal status awarded under *US Generating Antibiotic Incentives Now (GAIN) Act*
- ▶ Labeled for **fast track designation** – speed the FDA’s review process
- ▶ **10 years market exclusivity**, starting from the date of New Drug Application approval if RECCE® 327 completes the necessary clinical trials and is approved by the FDA
- ▶ QIDP designated drugs to treat serious or life-threatening conditions and fill an unmet medical need, are labeled for expedited review in order to facilitate their development

Qualified Infectious Disease Product (QIDP) designation is awarded if FDA considers the drug to treat “*serious or life-threatening infections, including those caused by an antibacterial or antifungal resistant pathogen.*”

RECCE® for use on pharmaceutical products and services

Manufacturing and production

- ▶ Wholly owned automated manufacturing facility in Sydney's Macquarie Park
- ▶ Raw materials plentiful and CHEAP - few \$/kilogram
- ▶ Automated manufacture process taking around 1¼ hours
- ▶ No expensive waste – 99.9% product yield
- ▶ Currently producing in volumes to support planned Phase I and Phase II clinical trials
- ▶ Facility built to pharmaceutical specification

Principal Engineer Arthur Kollaras & Executive Chairman/Chief Research Officer Dr Graham Melrose assess finished product

Board and management structure

Dr Graham Melrose – President & CRO

BSc (Hons), PhD (UWA), MBA (Macq), FRACI, C Chem, FAICD

Founder and inventor. Former Executive Director and Chief Research at Johnson & Johnson (Aust) Pty Ltd in Sydney, with global responsibilities, particularly in Asia-Pacific

Michele Dilizia – Vice President

BSc (Med Sci), Grad Dip Bus (Mkting), BA (Journ), GAICD, MASM

Co-inventor and qualified medical scientist; specialisation in medical microbiology and regulatory affairs

James Graham – Vice President

BCom (Entrepreneurship), GAICD

Extensive experience in marketing, business development and commercialisation of early stage technologies with global potential

Dr John Prendergast – Non-Executive Vice President

BSc (Hons), MSc (UNSW), PhD (UNSW), CSS (HU)

US based, current Chairman and Co-founder of Palatin Technologies, Inc. (NYSE: PTN) and Lead Director of Heat Biologics, Inc. (NASDAQ: HTBX) – extensive experience in the international commercialisation of pharmaceutical technologies

Alistair McKeough – Company Secretary (Outsourced - Whittens & McKeough)

Alistair is a qualified lawyer and Principal/Managing Director of McKeough & Whittens, Alistair has broad experience as a commercial litigator and Company Secretary to ASX Listed companies

Justin Reynolds – CFO (Outsourced - Pitcher Partners Sydney)

Justin is a qualified accountant and Partner of Pitcher Partners Sydney, Justin has broad experience covering all areas of accounting, taxation and assurance. Particularly, Justin's areas of expertise are business services and outsourced accounting

Arthur Kollaras – Principal Engineer

BSc Beng (Chem), PhilEng (Enviro), MIEAust, MISPE

Highly qualified in chemical engineering and microbiology, has significant experience taking a new technology concept to pilot plant and full scale FDA standards and production internationally

Dr Justin Ward – Principal Quality Chemist

BSc (Chem), PhD (Chem), MRACI, CChem

A quality control expert who has worked with leading pharmaceutical companies, he is bringing Recce's research and development, and manufacturing up to US FDA requirements

Economics of antibiotic development

A challenged business model – the antibiotic industry:

- ▶ Traditionally the more effective an antibiotic, the less likely it is to be used by clinicians who want to 'save it'. Less use – less sales...
- ▶ Conventional antibiotics commonly suffer resistance quickly; investment in 'new' drug candidates a risk ROI
- ▶ Pharmco's cutting antibiotic R&D – yet market need has never been greater

How might one 'unlock' the anti-infectives industry?

- ▶ A new class of antibiotics – having a unique mechanism of action that DOES NOT lose effectiveness with 'bacterial mutation' – superbugs – even with repeated use
- ▶ Broad spectrum capabilities against deadly bacteria, Gr +/- and superbugs
- ▶ A drug that can be administered quickly, without impractical diagnostic delays, where clinical 'guess-work' could be a thing of the past!

Indications suggest RECCE® 327 may just be this needed change

US Legislative Support of Antibiotic Development

- ▶ US *Right-to-Try Act* passed in May/June 2018
- ▶ **Designed to give US patients with life threatening diseases, immediate and direct access to potentially lifesaving drugs** - that have completed Phase I clinical trials
- ▶ New legislation mitigates possibility of weeks of procedural delay - Previous legislation termed Compassionate Use
- ▶ **Potentially resulting in improved patient outcomes**
 - With reduced risk to those providing them
 - Potential to build earlier ‘direct’ distribution – diluting late-stage pharma market access model
- ▶ Further evidence of evolving regulatory environment in the US - Largest antibiotic market in the world
- ▶ Potential aimed at **expediting new drugs with lifesaving potential**
- ▶ Legislation does not affect Company’s business at present

RECCE® Antibiotics – Technology

Recce's technology enjoys the added opportunity of multiple markets and product categories.

Current RECCE® 327 development program

Estimated timelines/indications are subject to change in development plans and regulatory requirements/clarifications

FIH - First-in-human
