About Clancy

Clancy Exploration (ASX: CLY) is an Australian-focused copper, gold and base metals explorer. Although a relatively new listing on the ASX (July 2007), the Company's portfolio has been built up over the last four years to consist of highly prospective copper-gold projects in the Lachlan Fold Belt of NSW and base metal projects in the Mount Read Volcanic Belt of Tasmania.

Clancy's competitive advantages include support from major shareholder, Geoinformatics (TSXV), one of the largest ground positions of any explorer in the prospective Macquarie Arc (>1933km²), and the innovative use of digital geological and geophysical data in probability based targeting.

The Company's objective is to advance its properties to a stage of commercial development by applying faster, less expensive and more reliable analytical methods to resource exploration. The exploration activities are well-funded and substantial upside exists with the potential addition of resources.

Additionally, Clancy has established joint ventures with Gold Fields Limited on three projects in NSW (managed by Clancy) and with Bass Metals Limited on the Tasmanian tenement package (managed by Bass Metals). Clancy, in conjunction with Gold Fields, spent over \$3.5 million on the projects prior to listing, with a combined \$7.4 million planned to be spent on the Company's tenement package within two years of listing.
