

ROE APPROVALS PATHWAY STREAMLINED

Ramelius Resources Limited (ASX: RMS) ("Ramelius" or "the Company") is pleased to announce that the Western Australian Environmental Protection Authority (EPA) has advised the company that the Roe Project is authorised to proceed through the established Part V works approval and licensing process under the Environmental Protection Act, and is not required to be formally assessed.

The outcome represents a significant project milestone, confirming that the environmental impacts of the Roe development can be appropriately managed through the Part V regulatory framework in line with the already completed approval for the Rebecca Project. The EPA decision provides a streamlined pathway to progress the combined Rebecca-Roe Project, located approximately 150km east of Kalgoorlie in the Western Australian goldfields.

With certainty in the approval process, Ramelius has scheduled early works to commence in late 2026. This decision provides the necessary scope to accelerate development timelines for the Roe area of the project and optimise overall project outcomes, a key component of the Company's 5-year growth plan.

Managing Director, Mark Zeptner, commented:

"This is a vital milestone in the approvals process for the Roe project. The EPA's decision reflects the thorough nature of our environmental planning and commitment to responsible development. Parallel processing of the Part V submission is already underway, supporting the timely securing of all necessary permits to advance the project toward production."

This ASX announcement was authorised for release by the Board of Directors.
