

STRIKE

RESOURCES LIMITED

30 SEPTEMBER 2007 QUARTERLY REPORT

SUMMARY OF MATERIAL MARKET ANNOUNCEMENTS DURING THE QUARTER

19 July 2007 - Release JORC Inferred Resource estimate of 172 million tonnes grading 62.28% Fe from the Opaban I and III concessions in the Apurimac Project area.

1 August 2007 - Release of June 2007 Quarterly Activities and Cashflow Report.

22 August 2007 - Release of presentation at the Iron Ore 2007 Conference jointly organised by AusIMM and CSIRO in Perth.

13 August 2007 - Announced commencement of pre-feasibility studies coordinated by Sinclair Knight Merz and involving the Snowden Group, CSIRO and Pipeline Systems Incorporated, on a 20 million tonne per annum mining operation in the Apurimac Project area and the transportation of iron ore by a slurry pipeline to a selected port site to be developed on the Pacific coast, which are expected to be completed in the January to March 2008 quarter.

21 September 2007 - Release of 2007 Full Year Reports comprising the Directors' Report and audited financial statements.

3 October 2007 - Release of "Peruvian Projects Update" containing the results of drilling in the northern part of the Opaban I deposit, detailed geophysical work within the Opaban III concession and initial reconnaissance mapping and sampling programme on 8 undrilled concessions within the Apurimac Project, and the potential for a 2 million tonne per annum surface mining operation in the Cuzco Project.

4 October 2007 - Release of presentation to fund managers and institutional investors in Hong Kong and Singapore.

29 October 2007 - Release of 2007 Annual Report.

31 October 2007 - Release of Notice of Annual General Meeting (AGM) and accompanying Prospectus (for the offer of Alara Uranium Limited shares under a proposed in specie distribution) for an AGM to be held on 30 November 2007.

Dated: 31 October 2007

Further information:

Shanker Madan
Managing Director
E | smadan@strikeresources.com.au

OBJECTIVES FOR DECEMBER 2007 QUARTER

Apurimac Iron Ore (Peru):

- (a) Upon the receipt of local community approvals and drilling and environmental permits, undertake further drilling campaigns at:
 - (i) Opaban I concession - to the north, west and at depth;
 - (ii) Opaban III concession - to test further iron ore mineralisation as a result of recently conducted detailed geophysical work;
 - (iii) Priority targets of surface outcrops of iron ore mineralisation within the remaining 21 granted Apurimac Project concessions, commencing with a 40 hole diamond drilling programme in the Ferrum 9 and Ferrum 11 concessions.
- (b) When available, interpretation of assay results from October/November 2007 drilling in the northern section of the Opaban I concession;
- (c) Conduct on-going ground magnetic surveys and mapping together with surface sampling over the remaining high priority concessions within the Apurimac Project area to identify drill targets;
- (d) Subject to aircraft availability, conduct an aeromagnetic survey over the north-western part of the Apurimac District.

Cuzco Iron Ore (Peru):

- (a) Interpretation of assay results and mineralogical/metallurgical testing by CSIRO from June 2007 scout drilling campaign;
- (b) Upon the receipt of drilling and environmental permits, undertake drilling, trenching and sampling of scree deposits and shallow iron mineralisation (of up to 10 metres deep) to define a resource of high grade iron ore for a potential two million tonne per annum iron ore lump and fines mining operation.
- (c) Upon the receipt of drilling and environmental permits and completion of the matters in (a) above, drilling to delineate an ore body capable of supporting a 20 million tonnes per annum mining operation.

King Sound Mineral Sands (Western Australia)

Undertake a reconnaissance trip to collect sediment samples across the tenements to verify historical reported heavy mineral grades and to ascertain whether ground geophysical techniques may be a viable exploration tool in the area.

Return of Capital of Alara Uranium Limited Shares

Subject to receipt of shareholder approval at the 2007 AGM (scheduled for 30 November 2007), undertake the completion of an *in-specie* distribution of 16 million Alara Uranium Limited shares to eligible Strike shareholders.

COMPANY PROFILE

Strike Resources Limited (ASX Code: SRK) is an Australian based mineral exploration and development company with a prospective portfolio of mineral exploration projects in Australia, Peru and Indonesia:

PROJECTS	LOCATION	COMMODITY	AREA (Hectares)
(1) Apurimac	Apurimac District, Peru	Iron Ore	23,688
(2) Cuzco	Cuzco District, Peru	Iron Ore	5,375
(3) Banten	West Java, Indonesia	Copper/Gold	5,601
(4) Paulsens East	West Pilbara, Western Australia	Iron Ore and Gold	1,964
(5) King Sound	West Kimberley, Western Australia	Mineral Sands	65,200

Peru is a major mining country and a top five producer of several base and precious metals, including copper and gold. Strike's confidence in Peru's mining and contractual laws is supported by the presence in the country of some of the world's leading mining companies. Although the country has had a long history of mining, its mineral potential is still considered outstanding as mineral discoveries continue to be made.

The Board comprises members with extensive experience in the resources sector and capital markets:

- Chairman, **Dr John Stephenson**, previously Exploration Director for Rio Tinto Australasia with more than 35 years experience in mineral exploration;
- Managing Director, **Mr H. Shanker Madan**, an experienced senior geologist with more than 30 years of world-wide experience in the exploration and evaluation of mineral deposits for various commodities with Wright Prospecting, BHP Minerals, Hamersley Iron and Rio Tinto;
- **Professor Malcolm Richmond**, who has more than 30 years experience with the Rio Tinto and CRA Groups in a number of positions including: Vice President, Strategy and Acquisitions, Managing Director, Research and Technology, Managing Director Development (Hamersley Iron Pty Limited);
- **Mr Farooq Khan** who has extensive experience in corporate law, the securities industry, capital markets and the executive management of ASX listed companies;
- **Mr William Johnson**, who commenced his career in resource exploration and has most recently held senior executive management roles in a number of public companies in Australia, New Zealand and Asia; and
- **Mr Victor Ho** who has had executive and company secretarial roles in a number of public listed companies since 2000.

Strike continues to investigate prospective iron ore resources in Peru, Australia and other regions. This includes applying for mineral concessions, entering into joint ventures and taking options over and acquiring concessions.

PROJECT OVERVIEW

APURIMAC AND CUZCO IRON ORE

(68.15%¹, Peru)

The Company has an interest in large high grade hematite and magnetite deposits in Peru – the Apurimac and Cuzco Projects – through an investment in Apurimac Ferrum S.A. (AF), a Peruvian company.

Apurimac Iron Ore Project: The Company continues to progress its objective of delineating a significant high-grade iron ore resource to support a 20 million tonnes per annum mining operation with a production start date in 2011. It is proposed to transport the ore to a new port site via a slurry pipeline. Pre-feasibility studies coordinated by Sinclair Knight Merz and involving the Snowden Group, CSIRO and Pipeline Systems Incorporated commenced in August 2007 are scheduled to be completed in the January to March 2008 quarter.

Cuzco Iron Ore Project: The Company has a broad objective of delineating a large iron ore body capable of supporting an additional 20 million tonnes per annum mining operation, which would take combined production from the Apurimac and Cuzco Projects to 40 million tonnes per annum.

The Company also believes there is potential for an independent early start up of a smaller scale mining operation of ~2 million tonnes per annum from scree and near surface mineralisation at Cuzco commencing in 2008/9. Such an operation could potentially utilise existing nearby rail infrastructure to transport iron ore to the coast.

Summary of Resource Estimate

	Estimate	Source
Apurimac Project	520 to 730 Mt target mineralisation	Strike ²
<i>Including: Opaban I Concession</i>	151 Mt JORC Inferred Mineral Resource grading 62.16% Fe with a cut-off grade of 55% Fe based on 6,383 metres of assayed RC and diamond drilling	Strike ³
<i>Opaban III Concession</i>	21 Mt JORC Inferred Mineral Resource grading 63.1% Fe with a cut-off grade of 55% Fe based on 1,102 metres of assayed diamond drilling	Strike ⁴
Cuzco Project	570 to 650 Mt target mineralisation	Strike ⁵

(It is noted that the target mineralisations referred to above are conceptual in nature as there has been insufficient exploration to define a JORC compliant Mineral Resource and it remains to be ascertained if exploration will result in the determination of a Mineral Resource.)

PROJECT OVERVIEW

STRIKE RESOURCES LIMITED
PERU IRON ORE PROJECTS
LOCATION PLAN

PROJECT OVERVIEW

AUSTRALIAN PROJECTS

Strike's project areas in Western Australia are highlighted in the map below.

Paulsens East Iron Ore (75%, West Pilbara, WA)

The Paulsens East tenements cover a total area of 19.64 square kilometres. The tenements are located ~140 kilometres west of Tom Price (close to bitumised road) and eight kilometres east-northeast of the Paulsens Gold mine in the northwest of Western Australia. RC drilling shows high grade intersections averaging 65.15% Fe from 14 to 16 metres and 63.4% Fe from 18 to 22 metres in hematite conglomerate mineralisation.

King Sound Mineral Sands (100%, West Kimberley, WA)

The Company has applied for 3 tenements covering a total area of 652 square kilometres. The project area is located ~10 kilometres south-west of the port town of Derby in the West Kimberley region of Western Australia. The Company has identified the King Sound area as being prospective for the accumulation of heavy minerals.

INDONESIAN PROJECTS

Banten Copper/ Gold

(100%, West Java, Indonesia)

This project comprises a 5,601 hectare concession located approximately 100 kilometres south-west of Jakarta.

The Company has identified epithermal gold veins, gold stock works and associated porphyry copper targets within the concession.

COMPANY PROJECTS

1. Apurimac Iron Ore Project

(68.15%⁶, Apurimac District, Peru)

Apurimac Project summary details are as follows:

- Company objective is to delineate a significant high-grade iron ore resource to support a 20 million tonnes per annum mining operation commencing in 2011;
- JORC Compliant Inferred Resource within the Opaban I and Opaban III concessions of 172 million tonnes grading 62.28% Fe, based on 6,383 metres of assayed reverse circulation (**RC**) and diamond drilling conducted at Opaban I and 1,102 metres of assayed diamond drilling conducted at Opaban III;
- Pre-feasibility studies (coordinated by Sinclair Knight Merz) on a 20 million tonne per annum mining operation and the transportation of iron ore by a slurry pipeline to a selected port site to be developed on the Pacific coast are expected to be completed in the January to March 2008 quarter;
- 28 mining concessions having a total area of 23,688 hectares – only two concessions (Opaban I and Opaban III) have so far been drilled; the as yet un-drilled concessions have occurrences of high-grade outcrops of iron ore based on regional mapping and sampling;
- Concessions are located close to the city of Andahuaylas in Peru's southern Andes.

View to North-West from Opaban I Concession, Apurimac Project, with high grade iron ore outcrops in foreground and the Andahuaylas Airport in the background

6 Refer Section 3 of Review of Operations in the Directors' Report at page 28 of the Company's 2007 Annual Report

COMPANY PROJECTS

172 MILLION TONNE JORC INFERRED RESOURCE

The Company has been conducting a drilling programme at its Apurimac Project in Peru to delineate a significant high grade iron ore resource to support a 20 million tonne per annum mining operation. Such production would place the Company in the top 15 iron ore producers in the world in terms of annual production.

On 19 July 2007, the Company was pleased to provide an upgraded JORC Inferred Resource of 172 million tonnes grading 62.28% Fe based upon drilling at the Opaban I and Opaban III deposits within the Apurimac Project area, an increase of 151 million tonnes over the previously reported JORC Inferred Resource⁷.

These results represent a major milestone in the development of the Company as it moves towards its target of becoming a significant international iron ore producer at the rate of 20 Million Tonnes per annum.

Current JORC Statement

The total JORC Inferred Resource within the Opaban I and III concessions is currently 172 million tonnes grading 62.28% Fe.

This is based on 6,383 metres of assayed RC (4,818 metres) and diamond (1,565 metres) drilling conducted at the Opaban I concession and 1,102 metres of assayed diamond drilling conducted at the Opaban III concession.

The Inferred Resource estimate for Opaban I has been calculated at 151 million tonnes grading 62.16% Fe with a cut-off grade of 55% Fe.⁸

The Inferred Resource estimate for Opaban III has been previously reported at 21 million tonnes grading 63.1% Fe with a cut-off grade of 55% Fe.⁹

The Opaban I and Opaban III iron mineralisation present as high grade hematite/magnetite aggregates with low levels of impurities.

The Company further notes that:

- (a) Drilling conducted within the Opaban I deposit has indicated that mineralisation is still open to the north, west and in places at depth;
- (b) Both Opaban I and Opaban III are not fully tested with significant potential for delineation of further high grade iron mineralisation;
- (c) The current JORC Inferred Resource is expected to increase as further drilling to the north, west and at depth in Opaban I is conducted and drilling commences to test further mineralisation in Opaban III;
- (d) Seventeen other high priority targets with surface outcropping iron mineralisation in the Apurimac Project area are yet to be drilled to test the deposit size previously estimated by the Peruvian Ministry of Energy and Mines (PMEN);
- (e) A plan has been formulated for further drilling at the Opaban I and III deposits to extend the JORC Resource. This drilling will commence once local community and environmental approvals are obtained;
- (f) Given the Company's increased level of confidence in the potential for a 20 million tonne per annum mining operation, it is developing a comprehensive community relations programme that deals not only with approvals for currently proposed drilling but also with the long term aspirations of local communities and stakeholders with respect to the operation of a significant mine in the region.

8 For further results, refer to 19 July 2007: ASX market announcement titled "Apurimac Project - JORC Resource Statement", 19 June 2007: ASX market announcement titled "Iron Ore Projects Update", 15 February 2007: ASX market announcement titled "Iron Ore Projects Update" and 23 August 2006: ASX market announcement titled "Peru Iron Ore Update on Apurimac Project"

9 23 August 2006: ASX market announcement titled "Peru Iron Ore Update on Apurimac Project"

COMPANY PROJECTS

Opaban I Concession – 151 million tonnes JORC Inferred Resource Grading 62.16% Fe

Details of the drilling conducted at Opaban I to outline the 151 million tonnes JORC Inferred Resource estimate for this concession are presented in the following diagram:

(Holes described as OP1-17 to OP1-31 were the drill locations for the 2005 diamond drilling programme, OP1-32 to OP1-52 were the drill locations for the December 2006 RC drilling programme and OP1-53 to OP1-71 were the drill locations for the March 2007 RC drilling programme.)

COMPANY PROJECTS

A simplified cross section of the Opaban I deposit is shown in the diagram below. This cross section highlights the flat lying tabular nature of the deposit and also demonstrates the potential for a low waste to ore ratio for any future mining of the deposit.

Note: Vertical exaggeration is approximately 2:1

The 151 million tonne JORC Inferred resource classification has been made based upon a number of criteria, including the geological confidence, the integrity of the drilling data and the spatial continuity of the mineralisation. Polygonal resource calculation methodology was adopted using weighted average grades and cumulative thicknesses of +55% Fe intervals within drill holes. The nature of the deposit is high grade iron skarn mineralisation hosted in limestone at the contact with diorite intrusions.

Photographs of typical iron ore outcrops located within the Opaban I Concession, Apurimac Project

COMPANY PROJECTS

Drilling Results – Northern Section of Opaban I Concession

Subsequent to the 6,383 metres of drilling conducted at Opaban I in 2005, 2006 and March 2007 to outline the 151 million tonnes JORC Inferred Resource estimate for this concession¹⁰, the Company completed a drilling campaign at the northern section of the Opaban I concession in June 2007 and assay results received during the quarter has returned high-grade intersections.

The Company had conducted a drilling campaign of 5 holes for a total of 411 metres to test the extent of mineralisation to the north of the previously delineated deposit at Opaban I.

The best results of this drilling campaign included 34.5 metres at 61.9% Fe.

A summary of the drilling results are set out below.

Drillhole	Depth	Azimuth	Dip	From (m)	To (m)	Intercept (m)	Fe %	P %	Al2O3 %	SiO2 %	S %	LOI 1000 %
OPI 72	100	0	-90	0	6.35	6.35	59.41	0.038	2.98	8.43	0.051	0.87
				25.7	33.2	7.5	64.56	0.02	1.35	5.28	0.06	-0.59
				62.9	68.9	6	58.85	0.03	1.17	4.08	2.25	0.85
Cumulative Thickness				0	68.9	19.85	61.19	0.03	1.82	5.92	0.72	0.31
OPI 73	57.3	0	-90	5.4	11.7	6.3	60.31	0.02	1.76	8.29	0.01	0.43
				14.2	17.8	3.6	63.35	0.01	1.62	6.89	0.02	-1.33
Cumulative Thickness				5.4	17.8	9.9	61.42	0.02	1.71	7.78	0.01	-0.21
OPI 74	82.2	120	-75	16.5	21	4.5	61.93	0.03	1.45	8.21	0.01	-1.19
				30	46.5	16.5	58.03	0.03	2.21	10.25	0.57	-0.85
Cumulative Thickness				16.5	46.5	21	58.86	0.03	2.05	9.82	0.45	-0.93
OPI 75	85.8	300	-60	22.5	57	34.5	61.94	0.02	1.52	6.86	0.48	-1.8

This drilling has confirmed an extension of mineralisation to the north and confirms that mineralisation continues to remain open to the north.

Further drilling in this area (a 6 hole campaign of diamond drilling) commenced in October 2007 and are expected to be completed in November 2007 with assayed results due in January 2008.

Upon completion of such drilling and assaying, the Company expects to increase its 151 million tonnes JORC Inferred Resource estimate for Opaban I.

Opaban III Concession – 21 million tonnes JORC Inferred Resource Grading 63.1% Fe

As previously announced, the Company had formed a view that high grade Fe mineralisation existed at Opaban III beyond the previously delineated JORC Inferred Resource of 21 million tonnes grading 63.1% Fe with a cut-off grade of 55% Fe.¹¹

To determine the extent of such additional mineralisation, the Company recently completed detailed geophysical work on prospective ground within the Opaban III concession. The Company is pleased to confirm that such work has indicated the presence of a large gravity anomaly that is significantly larger than the gravity anomaly upon which the 21 million tonnes JORC Inferred Resource was identified.

In the Company's experience, gravity anomalies in this area have a positive correlation to the existence of iron mineralisation. The Company accordingly believes that this anomaly is indicative of the presence of a large body of iron mineralisation under cover of diorite. The Company intends to confirm the presence of such mineralisation through drilling.

¹⁰ For further results, refer to 19 July 2007: ASX market announcement titled "Apurimac Project - JORC Resource Statement", 19 June 2007: ASX market announcement titled "Iron Ore Projects Update", 15 February 2007: ASX market announcement titled "Iron Ore Projects Update" and 23 August 2006: ASX market announcement titled "Peru Iron Ore Update on Apurimac Project "

¹¹ 23 August 2006: ASX market announcement titled "Peru Iron Ore Update on Apurimac Project "

COMPANY PROJECTS

The gravity image below shows this newly discovered area of potential mineralisation and illustrates its size relative to the anomaly upon which the 21 million tonnes JORC Inferred Resource was previously identified.

COMPANY PROJECTS

REGIONAL MAPPING AND SAMPLING

The Apurimac Project currently comprises 23 granted mineral concessions (totaling 20,288 hectares) in the Apurimac District in Southern Peru. To date the Company has focused its drilling on the Opaban I and Opaban III concessions, which together comprise only a small portion of the total land area of the Apurimac Project. The Company notes that all of these as yet un-drilled concessions have outcrops of massive iron ore.

As a preliminary means of determining the extent of iron ore mineralisation in these concession areas, the Company undertook a reconnaissance mapping and sampling programme across 8 of the 23 concessions. This programme is ongoing and will upon completion provide a detailed surface outline of all 23 concessions in the Apurimac Project area. In addition, a detailed ground magnetometer survey is currently underway in these concessions.

The initial reconnaissance, mapping and sampling programme has been extremely encouraging indicating the presence of numerous high grade iron mineralisation outcrops.

A map showing the sample locations with corresponding iron grades is set out on the following page.

With respect to the 15 concessions yet to be sampled and mapped, visual observations show that surface outcrops of massive iron ore extend for up to ~500 metres along strike. Photographs of some of these outcrops are set out to the right.

This mapping and sampling increases the Company's confidence that, given further time and drilling, it will be able to realise its objective of defining at a minimum, a high-grade resource within the Apurimac Project area able to support a 20 million tonnes per annum mining operation production for 20 years.

Cristoforo 28 Concession, Apurimac Project: Outcrop of massive iron ore in the foreground

COMPANY PROJECTS

Apurimac Project concession map showing encouraging high grade iron ore mineralisation from reconnaissance mapping and sampling programme

COMPANY PROJECTS

An regional aeromagnetic survey intended for the north-western parts of the Apurimac district has been cancelled due to the service provider being unable to supply a suitable fixed wing aircraft at the present time. The Company is investigating other options in this regard.

COMMENCEMENT OF PRE-FEASIBILITY STUDIES

In August 2007, the Company commissioned the following pre-feasibility studies in relation to the development of mining operations in the Apurimac Project area and the transportation of iron ore by slurry pipeline to a selected port site to be developed on the Pacific coast:

STUDY	STUDY GROUPS	STUDIES TO INCLUDE
(1) Geology and Resource Study	Snowden Group CSIRO (Commonwealth Scientific and Industrial Research Organisation)	• Geology – Local and regional geology and quality control procedures • Geotechnical considerations • Quantitative mineralogy • Development of resource model
(2) Mining Study	Snowden Group	• Ore body modelling • Conceptual mine design • Production schedules
(3) Mine Feasibility Study	Sinclair Knight Merz	• Mineralogy testwork • Metallurgical testwork • Process flowsheet development • Process plant and major equipment • Mine site infrastructure • Power infrastructure • Water infrastructure • Environmental impacts • Social/Community programme • Models for project development • Estimated preliminary operational and capital expenditure requirements • Preliminary risk assessment • Implementation strategy
(4) Transportation Study	Pipeline Systems Incorporated (PSI) (via its Peruvian joint venture PSI-JRI Peru SAC)	• Pipeline corridor/route options • Particle size determination • Hydraulic design • Overall systems design • Infrastructure requirements • Schedule for phases of work • Estimated preliminary operational and capital expenditure requirements
(5) Port Study	Sinclair Knight Merz / Cosapi SA	• Evaluation of alternative port locations • Footprints, layouts and sizing • Methods for water recovery at port site • Identify regulatory issues

The Company expects these pre-feasibility studies to be completed in the January to March 2008 quarter.

In addition, the Company has also commenced studies in relation to sales and marketing of its proposed high grade iron product to the Chinese and Japanese markets. To date this work has been conducted principally in- house with preliminary discussions having been instituted with significant purchasers in both markets. The response has been encouraging with the view having been expressed that such purchasers are seeking suppliers able to deliver large quantities of high quality iron ore fines and/or concentrate over the long term.

COMPANY PROJECTS

These discussions are ongoing and will expand to include other consumers of iron ore as the pre-feasibility studies continue. As the chemical and physical characteristics of the Apurimac Project end product becomes better defined, the Company will work with these purchasers to formulate a product mix best suited to their individual blast furnace operations.

In parallel with these activities, the Company continues to promote an active community relations programme to help advance both the exploration phase and the eventual commencement of mining operations.

PRELIMINARY MINERALOGY

The Company has commissioned CSIRO (Commonwealth Scientific and Industrial Research Organisation) to conduct extensive quantitative mineralogy on drill samples collected from the Opaban I concession.

The Company's preliminary views based on CSIRO's initial findings are:

- The iron content of the deposit comprises approximately a 50% hematite and 50% magnetite mix;
- Impurities (mainly silica as silicates) liberate (i.e. separate) easily when crushed to a particle size of one millimetre;
- At one millimetre crushing, silicates, which are soft in this instance, pulverise to ~30 microns (0.03 millimetres);
- Removal of impurities at a particle size of ~30 microns suggests a relatively high grade product can be expected, at around 65% Fe, with a relatively straightforward flowsheet involving crushing, screening and hydro-cyclone processing.

EXPLORATION PROGRAMME FOR APURIMAC PROJECT

The proposed exploration programme for the December 2007 quarter is outlined below:

- (a) Upon the receipt of local community approvals and drilling and environmental permits, undertake further drilling campaigns at:
 - (i) Opaban I concession - to the north, west and at depth;
 - (ii) Opaban III concession - to test further iron ore mineralisation as a result of recently conducted detailed geophysical work;
 - (iii) Priority targets of surface outcrops of iron ore mineralisation within the remaining 21 granted Apurimac Project concessions, commencing with a 40 hole diamond drilling programme in the Ferrum 9 and Ferrum 11 concessions.
- (b) When available, interpretation of assay results from October/November 2007 drilling in the northern section of the Opaban I concession;
- (c) Conduct on-going ground magnetic surveys and mapping together with surface sampling over the remaining high priority concessions within the Apurimac Project area to identify drill targets;
- (d) Subject to aircraft availability, conduct an aeromagnetic survey over the north-western part of the Apurimac District.

COMPANY PROJECTS

STRIKE RESOURCES LIMITED PERU IRON ORE PROJECTS PROJECT LOCATION PLAN

2. Cuzco Iron Ore Project

(68.15%¹², Cuzco District, Peru)

Cuzco Project summary details are as follows:

- Company objective to delineate a large ore body capable of supporting a 20 million tonnes per annum mining operation, which would take combined production from the Apurimac and Cuzco Projects to 40 million tonnes per annum;
- Prospect of an independent early, smaller scale mining operation of up to two million tonnes per annum from scree and near surface mineralisation commencing in 2008/9 to provide the potential for an early cash flow to support the Company's larger mining aspirations.
- The Company has determined a target mineralisation in the Cuzco concessions of between 570Mt to 650MT of high grade iron ore ¹³ based on detailed geophysical surveys conducted by Val D'or Geofisica, a Peruvian geophysical consultancy group;
- 6 mining concessions having a total area of 5,375 hectares;
- Concessions are located approximately 80 kilometres south from the city of Cuzco in Peru's southern Andes.

It is noted that the potential quantity and grades of the target mineralisation referred to above are conceptual in nature; there has been insufficient exploration to define a JORC compliant Mineral Resource; it remains to be ascertained if exploration will result in the determination of a Mineral Resource. The Company further notes that the estimate is based on mapping and surface sampling and has not been based on drilling. Detailed exploration will be required to confirm the estimate and to determine the full iron ore potential of the project.

¹² Refer Section 3 of Review of Operations in the Directors' Report at page 28 of this 2007 Annual Report

¹³ 1 November 2006: ASX market announcement titled "Peru Iron Ore Update - Cuzco Project"

COMPANY PROJECTS

Scout Drilling

The Company has completed a 17-hole scout core and RC drilling programme of 2,786 metres within the Cuzco Project area. Mineralisation, delineated through previous surface sampling and detailed geophysical work, occurs as flat tabular bodies radiating from a central core within an area of approximately 3 by 4 kilometres.

The mineralogy of these tabular bodies appears to be more variable than the Opaban I and III deposits in terms of iron grades and associated gangue minerals. The Company has accordingly forwarded drill samples to CSIRO Brisbane, Australia for more detailed mineralogical and metallurgical assessment. Details of such assessment is pending as at the date of this report.

Details of the scout drill hole locations (overlaid on to a magnetic intensity image) are presented in the diagram below.

COMPANY PROJECTS

SURFACE MINING POTENTIAL – 2 MILLION TONNES PER ANNUM MINING OPERATION

In addition to the sub-surface magnetite mineralisation, the Company has observed the widespread presence of high-grade hematite surface mineralisation (indicated by surface sampling) and associated scree deposits within the Cuzco Project area, as illustrated in the two photographs below.

The Company believes that the surface mineralisation and the scree ore, which is largely high-grade hematite, may be able to support a simple, relatively low cost mining operation of up to two million tonnes per annum.

The Company is investigating the ability of nearby rail infrastructure owned by Peru Rail to transport the ore to the coast. Peru Rail is already transporting mineral concentrates and ore on this rail infrastructure to the coast. Peru Rail has indicated that it would be supportive of such an operation and the Company has accordingly commenced negotiations with Peru Rail on rail access terms and transportation costs to the coast.

The Company is currently undertaking a detailed study to investigate the opportunity to commence production of a two million tonnes per annum high-grade lump and fines mining operation from the Cuzco Project area. Such an operation could potentially commence as early as 2009.

As part of this study the Company will shortly commence a detailed programme of drilling, trenching and sampling scree deposits and shallow iron ore mineralisation (up to 10 metres deep) to endeavour to define a resource of 30 to 40 million tonnes of high grade iron ore to support this potential operation.

Exploration Programme

The proposed exploration programme for the December 2007 quarter is outlined below:

- (a) Interpretation of assay results and mineralogical/metallurgical testing by CSIRO from June 2007 scout drilling campaign;
- (b) Upon the receipt of drilling and environmental permits, undertake drilling, trenching and sampling of scree deposits and shallow iron mineralisation (of up to 10 metres deep) to define a resource of high grade iron ore for a potential two million tonne per annum iron ore lump and fines mining operation;
- (c) Upon the receipt of drilling and environmental permits and completion of the matters in (a) above, drilling to delineate an ore body capable of supporting a 20 million tonnes per annum mining operation.

COMPANY PROJECTS

3. Paulsens East Iron Ore Project

(75%, West Pilbara Region, Western Australia)

The Paulsens East tenements cover a total area of 19.64 square kilometres. The tenements are located approximately 140 kilometres west of Tom Price (close to bitumised road) and eight kilometres east-northeast of the Paulsens Gold mine in the northwest of Western Australia.

A map outlining these tenements and the area of the high grade hematite conglomerate mineralisation is shown below.

This mineralisation (hematite conglomerate in hematite matrix) occurs as a ridge rising up to approximately 60 metres above the valley floor and extends for a strike distance of ~3,000 metres.

Profile view: A section of Hematite Ridge

The Company sampled the outcrop at various points along the length of the hematite ridge in June 2006; the results confirmed the presence of high grade hematite with grades of 62.59% to 67.05% Fe.¹⁴

The drilling results completed in December 2006 show high grade intersections in PERC002 averaging 65.15% Fe from 14 to 16 metres and 63.4% Fe from 18 to 22 metres. However, in the remaining 7 holes designed to intersect the mineralisation at depths between 12 metres and up to 128 metres only narrow thicknesses of one and

2 metres of high-grade conglomerate analysing between 60% Fe and 65% Fe, sandwiched between siliceous metasediments were encountered.¹⁵

The Company believes that there may be sufficient high-grade resource above the surface and at shallow depths up to 20 metres to support a small mining operation. The Company is currently investigating the feasibility of mining operations and the transportation of ore by truck to the Pilbara coast.

¹⁴ Refer 17 July 2006: ASX market announcement titled "Australian Iron Ore Update – Paulsens East High Grade Mineralisation"

¹⁵ Refer 1 May 2007: ASX market announcement titled "March 2007 Quarterly Report"

COMPANY PROJECTS

4. King Sound Mineral Sands Project

(100%, West Kimberley Region, Western Australia)

The Company has identified the King Sound area as being prospective for the accumulation of heavy minerals.

During the March 2007 quarter, the Company applied for 3 tenements covering a total area of 652 square kilometres. The project area is located approximately 10 kilometres south-west of the port town of Derby in the West Kimberley region of Western Australia.

Historical reporting indicates Carr Boyd Minerals Limited took two samples for mineralogical determinations in 1971. One of the samples contained 1.1% magnetite, 12.1% ilmenite (TiO_2) and 3.5% zircon before concentration. Heavy minerals made up 22.7% of the material. The area was subsequently sampled by Metal Investment Pty Ltd (Reported by Geodrillers P.L., 1971) using lines of auger holes. Their preliminary petrological examination gave the following mineralogical composition: 20% magnetite (by weight), 50% to 60% ilmenite (of which 10% is highly altered leucoxene), 1% to 5% rutile and approximately 5% zircon.

In the late 1980's BHP attempted a shallow (up to 6 metres) RC drilling programme over the King Sound sand flats. BHP experienced problems during their programme, mostly attributed to the drill rig's inability to penetrate the sands and the fact it became bogged on numerous occasions.

For these reasons combined with weather hardships, BHP abandoned their programme some 150 holes short of their plan

and concluded that "the Fitzroy River mouth and in Strokes Bay have not been adequately explored in this programme".

A reconnaissance trip is planned for November 2007 to collect sediment samples across the tenements to verify historical reported heavy mineral grades and to ascertain whether ground geophysical techniques may be a viable exploration tool in the area.

COMPANY PROJECTS

5. Banten Copper/Gold Project

(100%, West Java, Indonesia)

This project comprises a 5,601 hectare concession located approximately 100 kilometres south-west of Jakarta. Strike has identified epithermal gold veins, gold stock works and associated porphyry copper targets within the concession.

PT Indo Batubara (**PTIB**) completed a 126.4 metre, three hole diamond core drilling programme in August 2007, targeting epithermal gold and skarn base metal mineralisation, within the concession area.

The three drill holes reached depths of 37.8 metres (SMDD001), 43.6 metres (SMDD001-redrill), and 45 metres (SMDD002).

A summary of the diamond drilling results completed in August 2007 is outlined below:

HOLE ID	From (m)	To (m)	Cu (%)	Pb (%)	Zn (%)	Ag (g/t)
SMDD002	0	1	-	0.54	-	39.8
SMDD002	1	2	-	1.39	-	12.9
SMDD002	3	4	-	1	-	22.6
SMDD002	4	5	0.26	0.77	-	54.4
SMDD002	5	6	0.97	0.48	4.91	39.6
SMDD002	6	7	0.25	0.49	4.44	21.6
SMDD002	7	8	0.3	1.65	6.87	33
SMDD002	9	10	-	-	1.25	22

Near surface base metal (Zinc-Lead-Copper-Silver) mineralisation was recovered in SMDD002, however did not continue at depth.

The drilling results show high grade intersections in SMDD002 averaging 3.6% Zinc from 5 to 10 metres and 28g/t Silver from 0 metres to 10 metres.

The remaining holes designed to intersect the epithermal gold mineralisation recovered no anomalous results.

The Company has determined that this project is not a core asset and intends to divest its interest in due course.

The Company's interest in this project is under a cooperation agreement dated 16 March 2005 between Strike Operations Pty Ltd¹⁶ (**SOPL**), PTIB and PT Suda Miskin (**Suda Miskin**), under which PTIB has acquired the right to exclusively conduct general survey activities, explore for, exploit, mine and sell gold and any other minerals in the concession area.

Under the terms of the agreement, SOPL has paid US\$55,000 to Suda Miskin and has the following future payment and profit sharing obligations to Suda Miskin:

- (a) US\$30,000 by April 2008; and
- (b) A 19% share of after tax net profits from production.

The information in this report that relates to Exploration Results, Mineral Resources or Ore Reserves has been compiled by Mr Hem Shanker Madan who is a Member of The Australian Institute of Mining and Metallurgy. Mr Madan is the Managing Director of the Company. Mr Madan has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking, to qualify as a Competent Person as defined in the 2004 Edition of the "Australasian Code for Reporting of Mineral Resources and Ore Reserves (the JORC Code)." Mr Madan consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

1. ALARA URANIUM LIMITED

1.1 Alara 3 for 4 Options Rights Issue

Alara acquired the uranium assets of Strike in consideration for 28.75 million shares, which are currently escrowed for 24 months (expiring on 24 May 2009).

On 3 September 2007, Alara lodged a prospectus for a non-renounceable rights issue of 3 options for every 4 shares held by shareholders as at the record date (5.00pm WST on 12 September 2007) at an issue price of one cent per option. Each option is exercisable at a price of 25 cents, at any time on or before 30 June 2009.

Strike's entitlement under this rights issue was 21,562,500 options which were taken up at a cost of \$215,625.

Strike remains the largest share and option holder in Alara.

1.2 Strike's In Specie Distribution of 16 Million Alara Shares to Strike Shareholders

Strike proposes to undertake a reduction of share capital to be effected by returning to eligible Strike shareholders, in proportion to the number of Strike shares held by them as at the record date, 16,000,000 Alara shares held by Strike.

This is the subject of Resolution 1 in Strike's 2007 Notice of AGM (for an AGM to be held on 30 November 2007). The record date to determine the entitlement of Strike shareholders to receive a pro-rata distribution in specie of Alara shares under the capital return is 10 December 2007, subject to shareholder approval at the AGM.

Please refer to the Notice of AGM dated 22 October 2007 and released on ASX on 31 October 2007 for further information.

2. ANNUAL GENERAL MEETING

Please refer to the Notice of AGM dated 22 October 2007 and released on ASX on 31 October 2007 for further information on the resolutions being considered at the Company's 2007 AGM to be held in the Fremantle Room at Parmelia Hilton Hotel, 14 Mill Street, Perth, Western Australia at 3:45 pm (Perth time) on Friday, 30 November 2007.

3. SUMMARY OF SHARE CAPITAL CHANGES

A summary of share capital changes since 30 June 2007 is as follows:

Date	Description	Issue Price	No. Shares	Value of Issue	Running Balance of Issued Share Capital	Running Balance of Issued Listed Options
30/06/2006	Balance				47,835,701	23,369,141
31/12/2006	Balance				58,834,870	20,384,296
30/06/2007	Balance				76,009,248	13,409,919
16/07/2007	Conversion of options	\$0.20	51,899	\$10,379.80	76,061,147	13,358,020
18/07/2007	Conversion of options	\$0.20	59,367	\$11,873.40	76,120,514	13,298,653

3/09/2007	Conversion of options	\$0.20	82,742	\$16,548.40	77,294,350	12,124,817
13/09/2007	Conversion of options	\$0.20	85,967	\$17,193.40	77,380,317	12,038,850
24/09/2007	Conversion of options	\$0.20	92,412	\$18,482.40	77,472,729	11,946,438
30/09/2007	Balance				77,472,729	11,946,438
2/10/2007	Conversion of options	\$0.20	400,000	\$80,000.00	77,872,729	11,546,438
5/10/2007	Conversion of options	\$0.20	470,092	\$94,018.40	78,342,821	11,076,346
5/10/2007	Conversion of options	\$0.20	111,412	\$22,282.40	78,454,233	10,964,934
5/10/2007	Conversion of options	\$0.20	498,839	\$99,767.80	78,953,072	10,466,095
17/10/2007	Conversion of options	\$0.20	71,308	\$14,261.60	79,024,380	10,394,787
19/10/2007	Conversion of options	\$0.20	110,000	\$22,000.00	79,134,380	10,284,787
26/10/2007	Conversion of options	\$0.20	86,861	\$17,372.20	79,221,241	10,197,926
31/10/2007	Current Balance				79,221,241	10,197,926

4. OPTIONS

(a) Listed Options (ASX Code: SRK0)

During the quarter ending 30 September 2007, 1,463,481 listed \$0.20 (30 June 2008) options were exercised and converted into shares (as described in the above table), raising a total of \$292,696.20.

Subsequent to 30 September 2007, a further 1,748,512 listed \$0.20 (30 June 2008) options were exercised and converted into shares (as described in the above table), raising a total of \$349,702.40.

(b) Employees' Options

200,000 employee options were issued on 9 October 2007 to Strike's General Manager in Peru on the following terms and conditions:

1. Exercise price of \$2.90 per option;
2. After they have vested, options are exercisable at any time thereafter and expire 5:00pm (Perth time) on 5 September 2012 (the **Option Expiry Date**);
3. The options will vest as follows:
 - (a) 65,000 options will vest on successful completion of the employee's probationary employment period (which options may therefore be exercised at any time thereafter up to and including the Option Expiry Date) (**Tranche 1**);
 - (b) 65,000 options will vest 6 months after **Tranche 1** options have vested to the employee (which options may therefore be exercised at any time after they have vested up to and including the Option Expiry Date) (**Tranche 2**); and
 - (c) 70,000 options will vest 6 months after **Tranche 2** options have vested to the employee (which options may therefore be exercised at any time after they have vested up to and including the Option Expiry Date).

The full terms and conditions of issue are contained in the ASX Market Announcement dated 11 October 2007 and titled "Appendix 3B New Issue of 200,000 Employee Options".

BOARD OF DIRECTORS

There were no Board changes during the September 2007 quarter. The experience and qualifications of current directors are as follows:

John Stephenson

Chairman

<i>Appointed</i>	26 October 2005
<i>Qualifications</i>	BSc (honours and special honours) in Geology from the University of London through the former University College of Rhodesia and a PhD in Geology from the University of Manitoba, Canada.
<i>Experience</i>	Dr Stephenson is a highly experienced geologist with over 37 years experience in the mining sector. He has held senior positions in large mining companies, most recently as Exploration Director for Rio Tinto Australasia where he led Rio Tinto's exploration activities for five and a half years based in Perth. Dr Stephenson has also during his career led and managed exploration teams for both junior and major mining companies in several parts of the world, mainly in Southern and East Africa, North America and Australia exploring for gold, uranium, diamonds and base metals. He has also been involved with projects in Europe, South America and India. He led teams responsible for the discovery of a world class diamond deposit, the Diavik diamond mine in Canada's Northwest Territories and a high grade gold deposit, the former Golden Patricia gold mine in Ontario. Dr Stephenson has particular experience in the uranium sector having in the early to mid 1970's led reconnaissance airborne and ground surveys for uranium in Canada. Between 1978-1981, Dr Stephenson headed the ground follow-up of a country-wide airborne radiometric and magnetic survey for uranium and other minerals in Tanzania. In the early 90's Dr Stephenson led exploration for a subsidiary of Rio Tinto exploring for uranium and base metals in eastern Canada. Dr Stephenson also led Rio Tinto's exploration activities in Australia in the late 90's which included the search for uranium.
<i>Relevant interest in securities</i>	Shares – 200,000 Unlisted \$0.96 (21 July 2011) directors' options – 800,000 Unlisted \$2.81 (7 March 2012) directors' options – 350,000
<i>Other current directorships in listed entities</i>	Chairman of Alara Uranium Limited (AUQ) (since 18 May 2007)

H. Shanker Madan

Managing Director

<i>Appointed</i>	26 September 2005
<i>Qualifications</i>	Honours and Masters Science degrees in Applied Geology
<i>Experience</i>	Mr Madan has had world-wide experience in the exploration and evaluation of mineral deposits for various commodities. Mr Madan has been a Manager with Hamersley Iron, Group Leader with BHP Minerals, Chief Geologist with Hancock and Wright Prospecting and a Senior Geological Consultant to the Rio Tinto Group. Mr Madan has managed a range of mineral evaluation studies in Iran, Brazil and Western Australia for BHP, Rio Tinto and Hamersley Iron. He has also acted as a consultant to Rio Tinto, Ashton Mining and others on mineral projects in Brazil, South Africa, India, the Philippines, Fiji and United States, working on a range of iron ore, diamonds, gold, copper and chromite deposits. He has been involved in the discovery of 3 world class iron deposits in Western Australia for TexasGulf and BHP Minerals. From 1997 to 2001, Mr Madan managed the evaluation of resource projects for Hamersley Iron and more recently completed a resource due diligence study of the billion-dollar West Angelas project in the Pilbara region of Western Australia.
<i>Relevant interest in securities</i>	Shares – 503,846 Unlisted \$0.96 (21 July 2011) directors' options – 1,800,000 Unlisted \$2.81 (7 March 2012) directors' options – 950,000
<i>Other current directorships in listed entities</i>	Managing Director of Alara Uranium Limited (AUQ) (since 18 May 2007)

BOARD OF DIRECTORS

Farooq Khan

Executive Director

<i>Appointed</i>	9 September 1999
<i>Qualifications</i>	BJuris , LLB. (Western Australia)
<i>Experience</i>	Mr Khan is a qualified lawyer having previously practised principally in the field of corporate law. Mr Khan has extensive experience in the securities industry, capital markets and the executive management of ASX listed companies. In particular, Mr Khan has guided the establishment and growth of a number of public listed companies in the investment, mining and financial services sector. He has considerable experience in the fields of capital raisings, mergers and acquisitions and investments.

Malcolm Richmond

Non-Executive Director

<i>Appointed</i>	25 October 2006
<i>Qualifications</i>	B. Science Hons (Metallurgy) and B. Commerce Merit (Econs) (New South Wales)
<i>Experience</i>	Professor Richmond has 30 years experience with the Rio Tinto and CRA Groups in a number of positions including: Vice President, Strategy and Acquisitions, Managing Director, Research and Technology, Managing Director Development (Hamersley Iron Pty Limited) and Director of Hismelt Corporation Pty Limited. He was formerly Deputy Chairman of the Australian Mineral Industries Research Association and Vice President of the WA Chamber of Minerals and Energy. Professor Richmond also served as a Member on the Boards of a number of public and governmental bodies and other public listed companies. Professor Richmond is a qualified metallurgist and economist with extensive senior executive and board experience in the resource and technology industries both in Australia and internationally. His special interests include corporate strategy and the development of markets for internationally traded minerals and metals - particularly in Asia. He is currently a Visiting Professor at the Graduate School of Management and School of Engineering, University of Western Australia, and a Fellow of the Australian Academy of Technological Sciences & Engineering, a Fellow of Australian Institute of Mining and Metallurgy and a Member of Strategic Planning Institute (US).

¹⁸ The transference of this mining application has been recorded in a temporary entry (No. 11067786)

¹⁹ Pursuant to assignment and option agreement dated 18 May 2007 between Strike Resources Peru SAC (the Peruvian subsidiary of the Company) and the Peruvian vendor. Strike Resources Peru SAC's rights under this assignment and option agreement is assignable and as the concessions are located near some of the Apurimac Project concessions held by Apurimac Ferrum, it is intended that these concessions be assigned to Apurimac Ferrum at cost.

Compliance statement

- 1 This statement has been prepared under accounting policies which comply with accounting standards as defined in the Corporations Act or other standards acceptable to ASX (see note 4).
- 2 This statement **does** give a true and fair view of the matters disclosed.

31 October 2007

Victor Ho
Director

+ See Chapter 19 for defined terms

NOTES

- 1) The Company currently holds the following share investments:

Company	No Shares	%	31-Oct-07	
			Last Bid Price	Market Value
Alara Uranium Limited (AUQ)	28,750,000	35.7%	\$0.170	\$4,887,500
Alara Uranium Limited Options (AUQO)	21,562,500	35.7%	\$0.041	\$884,063
Orion Equities Limited (OEQ)	505,026	2.8%	\$1.335	\$674,210
Queste Communications Ltd (QUE)	826,950	2.9%	\$0.330	\$272,894
Sofcom Limited (SOF)	12,420,439	27.8%	suspended	\$0
Total				\$6,718,666

Share investments are regarded as liquid assets to supplement the Company's cash reserves.

The Company is the largest shareholder in SOF which is currently suspended awaiting a potential recapitalisation and re-admission to ASX.

- 2) During the quarter ending 30 September 2007, 1,463,481 listed \$0.20 (30 June 2008) options were exercised and converted into shares (as described in the table at page 23), raising a total of \$292,696
- 3) The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note
- 4) The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent
- 5) Issued and quoted securities The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 6) The definitions in, and provisions of, AASB 1022: Accounting for Extractive Industries and AASB 1026: Statement of Cash Flows apply to this report.
- 7) Accounting Standards ASX will accept, for example, the use of International Accounting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
