FURTHER MAJOR COPPER INTERCEPTS FROM LLAHUIN PORPHYRY PROJECT, CHILE

***MORE STRONG RESULTS LAY FOUNDATIONS FOR
INITIAL JORC RESOURCE TARGETED BY YEAR-END***

Highlights

- **Excellent new results from resource drilling at the Llahuin Copper Project, Chile including:**
 - *Hole LLA-004* 175m @ 0.31% Cu with 0.05g/t Au from 0m
 - *Hole LLA-005* 199m @ 0.33% Cu with 0.08g/t Au from 1m
 - *Hole LLA-006* 61m @ 0.37% Cu with 0.08g/t Au from 0m
 - *Hole LLA-006* 36m @ 0.39% Cu with 0.17g/t Au from 187m
 - *Hole LLA-010* 210m @ 0.31% Cu with 0.03g/t Au from 0m
 - *Hole LLA-011* 220m @ 0.39% Cu with 0.08g/t Au from 0m
 - *Hole LLA-012* 205m @ 0.36% Cu with 0.06g/t Au from 0m
- **Best 1m copper interval of 1.80% Cu in hole LLA-011 and best 1m gold interval of 18.6g/t Au in hole LLA-009.**
- **Mineralisation remains open both laterally and at depth.**
- **Resource drilling programme continuing with further results for holes LLA-013 to LLA-020 expected shortly – *initial JORC resource targeted by year-end.***
- **Substantial new anomaly identified from recently completed IP survey at Chitigua Breccia Copper Project – *major new drilling program to commence shortly.***

Llahuin Copper Project

International mining company **Southern Hemisphere Mining Limited** (“Southern Hemisphere” or the “Company”) is pleased to report further highly encouraging results from resource drilling at the recently acquired **Llahuin Copper Project** (“Llahuin”), located 250km north of Santiago in Chile at an elevation of 1300 metres.

The latest results, for holes LLA-004 to LLA-012, follow the excellent results for the first three holes reported on 18 July 2011 and confirm the presence of a large-scale porphyry copper-gold system at Llahuin, vindicating the Company's decision to move directly to a resource drilling program.

The latest results include several broad intersections of copper-gold mineralisation, which has now been defined within a dioritic porphyry located within the Llahuin Amapola group of exploitation licences, which cover a total area of 772 hectares.

According to the type of deposit, alteration, mineralization, geographic location and geological age, the Llahuin mineralization can be defined as a porphyry copper system, rich in gold, similar to the Carmen de Andacollo ore deposit, located 350km north of Santiago, which has a resource of 400 million tonnes grading 0.38% copper plus gold credits. Evidence from all analysis results to date at Llahuin indicates a porphyry deposit with a target copper grade of 0.4% Cu plus molybdenum and gold credits.

Llahuin Drilling Progress

As at 18 August 2011 the Company had completed 19 Reverse Circulation (RC) drill holes for a total depth of 3,733m, and commenced deepening hole LLA-010 with a Diamond Core drill. This included two RC drill holes LLA-008 and LLA-009 located to test a prospective gold area.

A schedule of these holes is shown below:

Hole ID	Easting	Northing	RL	Azimuth	Dip	Depth
LLA-001	307866	6531823	1342	300	-58.00	208
LLA-002	307819	6531846	1346	300	-58.00	170
LLA-003	307740	6531875	1331	300	-58.00	77
LLA-004	307798	6531911	1332	300	-60.00	244
LLA-005	307823	6531869	1342	300	-60.00	200
LLA-006	307809	6531798	1341	300	-60.00	243
LLA-007	307792	6531969	1323	300	-60.00	192
LLA-008	307352	6532693	1289	270	-60.00	167
LLA-009	307368	6532605	1289	270	-60.00	210
LLA-010	307913	6531801	1344	300	-60.00	210
LLA-011	307776	6531865	1345	300	-60.00	220
LLA-012	307733	6531818	1340	300	-61.00	208
LLA-013	307863	6531871	1345	300	-60.00	203
LLA-014	307942	6531845	1335	300	-60.00	197
LLA-015	307822	6531681	1331	300	-60.00	196
LLA-016	307851	6531773	1335	300	-60.00	198
LLA-017	307695	6531900	1323	300	-60.00	194
LLA-018	307653	6531643	1325	300	-60.00	192
LLA-019	307724	6531657	1324	300	-60.00	204
Total						3733

Table 1 – Drilling Program to date, Llahuin Project

Holes LLA-001 through to LLA-007 and LLA-010 through to LLA-018 tested the **Llahuin Porphyry** within the Amapola Group.

Holes LLA-008 and LLA-009 tested an area **prospective for gold** as evidenced by past artisanal mining activities. This area is located 1km north of the Llahuin Porphyry.

To date analysis results have been received for holes LLA001-LLA012. For hole LLA-009 samples were taken and analysis results received for each alternate metre interval.

Fig. 1 – Llahuin Copper Drilling Location Map for Holes LLA-001 to LLA-006 & LLA-010 to LLA-012

Refer to attachment for detailed drill results received for LLA004-LLA012.

Refer to 18 July 2011 ASX and TSX-V announcements for Llahuin geological information and analysis results for holes LLA-001 to LLA-003.

Fig. 2 – Cross-section showing holes LLA001-LLA003 and LLA010-LLA011, Llahuin Project

Sampling and Analysis Procedures

From the RC Drill holes, 5kg samples were taken from each metre interval, with the exception of hole LLA-009 where samples were taken for each alternate metre interval. The samples are derived from riffle splitting each metre intercept. The samples were sent to Andes Analytical Assay Ltda (Chile) in Santiago for sample preparation and analysis. Duplicate samples were taken on a 1 in 20 basis.

Analysis was undertaken using atomic absorption spectrometry methods. Andes Analytical Assay Ltda (Chile) is an independent full service commercial laboratory accredited under ISO 9001:2008. Standard samples and repeat analyses were used by the laboratory to provide checks on the assay results.

Chitigua Porphyry Copper Project

The Chitigua Project is located 100km north of Calama at an elevation of 4,000 metres on the Western Fault between the El Abra and Quebrada Blanca mines.

Following 8 July 2011 ASX and TSX-V announcements, which confirmed the potential for a porphyry copper system at the Chitigua Project, the Company has completed an Induced Polarization and Resistivity survey (IP Survey) on the Breccia Zone of the Chitigua Project.

Additionally, an IP survey has commenced over the Chitigua Church zone, which lies 3.5 km to the south west of the Breccia Zone. Interpretation of the results is underway and this will assist with determining future drill-hole locations and enhance the likelihood of a discovery of a major porphyry deposit in the Western Fault system, which is the world's richest copper metallogenic zone.

An RC rig will commence a further drilling campaign at Chitigua in September with the objective of completing 23 holes to a depth of 300 metres. This program is targeted for completion by year-end.

Fig 3 – IP Survey- Chitigua Breccia Copper Project

Los Pumas Manganese Project

Work is continuing on the Los Pumas Project with the amended Environmental Impact Statement (EIS) being lodged this month with the Arica Regional Committee. Approval is expected in the 1st Quarter of 2012.

Further heavy media separation metallurgical test work is currently being undertaken by Transmin Metallurgical Consultants in Lima, Peru with results expected by the 4th Quarter of 2011.

However, the current manganese market conditions have reduced the priority of the Los Pumas Manganese Project in the Company's plans. Accordingly, the Feasibility Study has been delayed but will continue to be progressed in line with the testwork results and EIS approval.

-ENDS-
