

TelstraClear New Zealand selects eServGlobal Intelligent Network to support next generation enhanced services

eServGlobal continues momentum for next generation IN, selected by TelstraClear.

WELLINGTON, NEW ZEALAND – 25 August, 2003 - TelstraClear Limited, New Zealand's second largest full service telecommunications company and a wholly owned subsidiary of Telstra Corporation, one of Asia-Pacific's largest telecommunications groups, and eServGlobal Limited (ASX: ESV), a worldwide supplier of independent and flexible Intelligent Network systems, today announced that TelstraClear has selected the eServGlobal IN product suite.

eServGlobal was selected following TelstraClear's review of 11 different solutions.

eServGlobal IN will be implemented with pre-integrated elements for the control, flexible configuration and management of toll-free (0800 & 0508) services, as well as capabilities for a large suite of other unique enhanced services & features. eServGlobal IN will enable TelstraClear to rapidly deploy value-added services. The system utilises Cisco IP Transfer Point (ITP) to carry signalling using the Sigtran protocol, which offers an order of magnitude efficiency gain over traditional signalling.

The extended configuration of eServGlobal IN provides flexible call control across both circuit and packet networks, as well as advanced call control and data session control on mobile networks. eServGlobal IN also provides the ability to blend all these services together in specialised services offerings.

"We will be relying on the unique flexibility and carrier-grade stability inherent in the eServGlobal products to support our aggressive growth," said Rod Grieve, Group Product Manager at TelstraClear. "We are confident that this project will enable the innovation that our customers expect from TelstraClear, adding to TelstraClear's already comprehensive product offering in the New Zealand and trans-Tasman marketplace."

"eServGlobal IN offers a unique blend of service control features which enable operators to gain direct business control of their enhanced services, and to tweak their business settings and offerings in real-time," said Colin Lynch, Director of Asia Pacific Business Development at eServGlobal. "By constantly aligning its product development with operator needs, eServGlobal ensures leading operators maximise their return on investment with long-term cost of ownership advantages."

About TelstraClear Limited

TelstraClear Limited is New Zealand's second largest full service telecommunications company, providing innovative market leading products, services and customer focus to the business, government, wholesale and residential sectors.

Created from the integration of TelstraSaturn Limited and CLEAR Communications Limited in December 2001, TelstraClear provides a real choice in the New Zealand telecommunications market, and seamless services to Trans Tasman customers.

The company provides state-of-the-art broadband technology to deliver voice, high-speed data, mobile, wireless and Internet services and cable TV to businesses and consumers through a customer-focused business.

About eServGlobal Limited

eServGlobal Limited (ASX:ESV) is a worldwide supplier of Intelligent Networking environments for public telecommunications networks. eServGlobal specialises in independent and flexible systems so that enhanced telecoms services can be launched and individualised faster.

eServGlobal's systems are widely deployed in major telecoms networks in Europe and Asia Pacific, and support over 200 million revenue-generating calls every day.

eServGlobal's products are designed and built in Wellington, New Zealand. eServGlobal has operations in Brussels, Ipswich (UK), Jakarta, Manila, Singapore, Sydney and Taipei.
