DISCLAIMER

This document is for information purposes only. It is not a prospectus, disclosure document or offering document under Australian law or under any other law and does not constitute an offer or invitation to apply for securities. This document is not an offer of securities for subscription or sale in the United States of America or any other jurisdiction in which such an offer or solicitation is not authorized or to any other person to whom it is unlawful to make such an offer or solicitation. The information in this document is an overview and does not contain all the information necessary to make an investment decision. To the extent permitted by law, no representation or warranty, express or implied, is made as to the accuracy, adequacy or reliability of any statements, estimates or opinions or other information contained in this document, any of which may change without notice. Neither TMK Energy Limited (TMK), nor any other person warrants the future performance of TMK or any return on any investment made in TMK. Some of the information contained in this document constitutes forward-looking statements that are subject to various risks and uncertainties, not all of which may be disclosed. These statements discuss future objectives or expectations concerning results of operations or financial condition or provide other forward-looking information. TMK's actual results, performances or achievements could be significantly different from the results or objectives expressed in, or implied by, those forward-looking statements. Prospective investors should make their own independent evaluation of an investment in any securities. The material contained in this document does not consider the investment objectives, financial situation or needs of any individual investor. TMK does not make any recommendation to investors regarding the suitability of any securities and the recipient must make its own assessment and/or seek independent advice on financial, legal, tax and other matters, including the merits and risks involved, before making any investments.

COMPETENT PERSON'S STATEMENT The information in this document that pertains to the estimates of Resources for the Gurvantes XXXV CSG Project have been taken from independent reports provided by Netherland, Sewell & Associates (NSAI) dated 3 November 2022 (Contingent Resources) and 16 August 2021 (Prospective Resources), both of which were commissioned by the Company. The Resources included in the report have been prepared using definitions and guidelines set forth in the 2018 Petroleum Resources Management System (PRMS) approved by the society of Petroleum Engineers. The Resources included in this report are based on, and fairly represents, information and supporting documentation compiled by Mr. John Hattner, an employee of NSAI. Mr Hattner is a Qualified Petroleum Reserves and Resources Evaluator and is qualified in accordance with the requirements of ASX Listing Rule 5.41 and consents to the inclusion of the information in this report of the matters based on this information in the form and context in which it appears.

The Contingent Resources were independently estimated by NSAI as of 31 October 2022 and are classified in three categories of 1C, 2C and 3C based on the level of confidence that NSAI has with respect to the recoverability of gas from both the Upper Coal Seam package and Lower Coal Seam package and have been calculated by NSAI using deterministic methods.

The Prospective Resources have been determined by NSAI using probabilistic methods and are dependent on a CSG discovery being made. If a discovery is made and development is undertaken, the probability that the recoverable volumes will equal or exceed the unrisks estimated amounts is 90 percent for the low estimate, 50 percent for the best estimate, and 10 percent for the high estimate. The risks 1U, 2U, and 3U Prospective Resources have been aggregated by arithmetic summation; therefore, these totals do not include the portfolio effect that might result from statistical aggregation.

For further details on the Resource estimates presented in this report, refer to the Company's ASX announcement from 9 November 2022. As at the date of this presentation, the Company is not aware of any new information that could materially change the Resource estimates and that all material assumptions and technical parameters underpinning the Resource estimate continue to apply and have not materially changed.

GURVANTES XXXV NATURAL GAS PROJECT

PROJECT OVERVIEW

Location	South Gobi Basin, Mongolia
Description	Production Sharing Contract (PSC) / Exploration License
Size	~8,400km ²
TMK Interest	100%
Status	Exploration and Appraisal
Markets	• High local demand for energy in South Gobi • Growing domestic gas market opportunities • ~400km from the existing West-East gas pipeline in northern China
Certified Natural Gas Resources*	1.2 TCF (2C) – Nariin Sukhait (75km ²) 5.3 TCF (2U) – Exploration Upside (Greater Project Area)

**Cautionary Statement: The estimated quantities of petroleum that may be potentially recovered by the application of a future development project relate to undiscovered accumulations. These estimates have both an associated risk of discovery and a risk of development. Further exploration, appraisal and evaluation are required to determine the existence of a significant quantity of potentially moveable hydrocarbons. The Company confirms that it is not aware of any new information or data that materially affects the information included in the relevant market announcement and that all the material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. Resource estimates presented here for the Gurvantes XXXV Project were independently certified by Netherland, Sewell & Associates (NSAI) and were initially disclosed in ASX announcement "1.2TCF Contingent Gas Resource (2C) Independently Certified" dated 9 November 2022.*

MEASURING UP: SCALE THAT SPEAKS VOLUMES

The Maiden Contingent Resource (2C) was delivered from just

75km²

and has a (2C) Maiden **Contingent Resource** of

1.2 TCF

The **Gurvantes XXXV Project** has a total area of approx.

8,400km²

Exceptional **coal thicknesses** within the Upper Coal Seam production zone

That's enough gas to run **twelve** combined cycle **50MW** gas power stations for

30 years

CORPORATE SNAPSHOT

Goal: To build a gas industry in Mongolia on the back of the largest discovered contingent gas resource

TMK Energy Limited (as of 12 November 2025)

SHAREHOLDER INFORMATION

CONSOLIDATION UPDATE

- Consolidation of all TMK securities **completed** on 11 November 2025
- All securities consolidated on the basis that there is now **1 TMK security** for every **55 TMK securities** held prior to the consolidation (being Shares, Options or other securities)
- All fractions have been **rounded up** to the next whole number
- Exercise price of options (ASX:TMKO, TMKOB) have been increased by a factor of 55 with no change to the expiry date
- **New holding statements** reflecting the consolidated number of securities held by shareholders dispatched on 12 November 2025.
- Shares expected to **commence trading on a normal T+2 basis** on 18 November 2025

TMK – LEVERAGED TO THE UPSIDE

- TMK has advanced from an early-stage gas exploration company in 2022 to being on the brink of proving up a significant 1.2 TCF (2C) coal seam gas (CSG) resource in Mongolia adjacent to China and its growing demand for energy
- ~US\$15M invested to date in the 100% owned and operated Gurvantes XXXV CSG Project, the investment delivering seven (7) operating Pilot Production Wells, associated infrastructure and facilities, plus a 50+ person capacity camp
- Low-cost operation with major capital investment complete and operating costs significantly reduced over the last 12 months
- Key ingredients are now in place to:
 - prove commercial gas production rates;
 - introduce development capital through funding partnerships; and
 - increase the resource base through targeted exploration

RAPIDLY MOVING FORWARD

PROJECT HAS BEEN SUBSTANTIALLY DE-RISKED FOLLOWING A STAGED APPROACH TO EXPLORATION & APPRAISAL

PILOT PROJECT OPERATIONS

- Seven Pilot Wells drilled and completed with;
 - elevated focus on reservoir management techniques from 2H 2025 resulting in record gas flows and no well workovers (which cost time and money)
 - reservoir modelling project nearing completion demonstrating reservoir pressure is declining and commercial gas flows can be achieved
 - water production remains over 500 barrels per day, an important metric required to reduce the reservoir pressure
- Experienced Operations Superintendent commenced on 3 November 2025 based on site, with initial focus being on optimizing field operations, improving efficiencies and maintaining a safe work environment.

Mr. Brad Reeve – Operations Superintendent
based at Nariin Sukhait (Pilot Well Project)

PILOT WELL PROJECT – THE DETAILS

PRODUCTION WELL	LF-01	LF-02	LF-03	LF-04	LF-05	LF-06	LF-07
TOTAL DEPTH	375m	407m	515m	503m	480m	475m	420m
NET COAL THICKNESS	61m	62m	68m	~60m	~60m	~60m	~56m
DATE DRILLED	April 2023	May 2023	May 2023	Nov 2024	Oct 2024	Oct 2024	August 2025
PRODUCTION INTERVAL DEPTH	184m – 314m	245m – 393m	316m – 470m	300m – 450m	270m – 420m	270m – 423m	204m – 358m

Illustrative representation of the Lucky Fox Pilot Well Program with respect to the upper and lower coal seams.

- ✓ Seven pilot wells now on production, with LF-07 now one of the **top gas producers**
- ✓ **Pressure declines** being observed in all producing wells
- ✓ Interference between wells, indicating **good permeability**, being observed during testing
- ✓ Field **operating costs significantly reduced** over the last 12 months

KEY DELIVERABLES BEING MET

- ✓ **Added 4 Pilot Production Wells** – a 133% increase from 3 wells to a total of 7 pilot wells
- ✓ **Increase gas flows** – pressure data collected in 1H 2025 indicate reservoir pressure continuing to decline. Elevated **focus on reservoir management techniques** and data collection in 2H 2025.
- ✓ **Technical excellence** – key appointments being made in preparation for **accelerated project development**
- **Increase contingent resources** – targeted exploration program commenced shortly to demonstrate **further prospectivity** along strike and add contingent resources
- **Secure funding partners** – formal process commenced to introduce funding partners

CSG PRODUCTION METHODOLOGY

Illustrative representation of the Lucky Fox Pilot Well Program.

- ✓ Establish **high water production** rates
- ✓ High water rates are a proxy for **good permeability** and a key metric required to **reduce reservoir pressure**
- ✓ Extract as much water as possible over as shorter time frame as possible
- ✓ **Limit any potential reservoir damage** and/or pump blockages by not pumping too hard on the wells
- ✓ Confirm **no significant water ingress** from non coal strata (already validated by DTS data)
- ✓ Conduct regular **pressure monitoring** to prove reservoir pressure is being reduced
- ✓ **Patience and time required** to deliver material increase in gas flows

SNOW LEOPARD-02 ADSORPTION ISOTHERM

- Adsorption isotherm (Langmuir Curve) has identified the desorption pressure for the Pilot Project area (~1380kPa or 200psi)
- Production monitoring clearly shows the initial reservoir pressure has decreased towards the estimated desorption pressure

RESERVOIR PRESSURE REDUCTION

- Reservoir pressure continues to decline as additional water is produced
- Regular pressure monitoring shows the reservoir pressure is approaching the estimated desorption pressure (derived from the Langmuir Curve)

DOMESTIC SUPPLY OPPORTUNITY

- The capital of Mongolia, Ulaanbaatar, is heavily polluted and has recently initiated policy directives aimed at reducing pollution in Ger Districts through use of natural gas
- Significant push to decarbonise Mongolia's energy sector, with political desire to seeking greener forms of energy generation
- Mongolia currently has no gas production, importing all gas products resulting in significant issues around energy security and reliability, while leaving huge growth potential for local production
- Strong political desire to develop the natural gas industry to reduce pollution and address energy security, reliability, and independence
- Mining accounts for 40% of Mongolia's energy consumption

SOUTH GOBI PROVINCE ENERGY INFRASTRUCTURE

CHINA SUPPLY OPPORTUNITY

CHINESE ENERGY MARKET

- Chinese gas demand continues to grow rapidly
- Forecast Chinese consumption in 2040 between 497bcm and 655bcm*
- Supply deficit of between 56bcm and 214bcm to be filled by LNG imports and additional pipeline volumes (Mongolia?)

NEIGHBOURING GAS INFRASTRUCTURE

- Gurvantes XXXV is ~20km from Chinese boarder and close to existing gas infrastructure in northern China
- Mongolian gas has a significant cost advantage over current suppliers to China due to low production and delivery costs

DEVELOPING RELATIONSHIPS

- Strategic Alliance with J-Energy to provide technical and commercial services and introduce project to potential Chinese partners
- TMK developing and strengthening ties through key relationships with key operators in the downstream energy market in Mongolia and China
- Targeting a project partner to be introduced in 2026
