The Company is expecting the return of further assay results from completed holes KRC 023 to KRC 028 which have been submitted for assaying.

The above results are part of an infill drilling programme currently being conducted by the Company, with the intention of upgrading this 2.4 km long zone of mineralisation to an open pittable JORC compliant resource/reserve down to a vertical depth of 150 m. A scoping study conducted by ProMet Engineers in November 2005 has estimated some 17,500,000 tonnes to 100m depth yielding average grades of 3% zinc, 1% lead and 28 g/t silver, with significant credits from copper and vanadium.
