INTEVIA WINS PRESTIGIOUS WORLD SUPERYACHT AWARD IN TECHNOLOGY

CHICAGO, ILLINOIS, USA – 21 April 2008 – Intevia[®] Intelligent Fastening Technology (IFT) has been awarded the coveted Boat International World Superyacht Award in the Technology category at a gala event held 18 April in Venice, Italy. This prestigious award, The Neptune, was presented by Boat International Media, the world leader in superyacht publishing for over 20 years.

The Technology Award presented to Telezygology Inc. (ASX: TZL) for Intevia[®] IFT is bestowed on the most significant new technology and one that has the potential to achieve a wide impact and acceptance on superyachts. Overall, the World Superyacht Awards celebrate the excellence in innovation and technology that goes into designing, engineering and constructing the world's most exceptional superyachts. A panel of superyacht owners and respected industry professionals including project managers, captains, naval architects, shipyard owners and engineers chose Intevia[®] Intelligent Fastening Technology as the best entry in the Technology category.

The TZ Group has been making inroads into the marine business segment with Intevia[®] IFT and recently outfitted a very large luxury yacht with Intevia[®] devices. The successful completion of this installation has gained interest in the marine market and helps accelerate launching Intevia[®] IFT into the USD\$200 million global marine market.

"Intevia[®] technology has gained a great deal of recognition in the marine market in a relatively short period of time," said TZ Group Chief Technology Officer, Dickory Rudduck. Mr. Rudduck, who attended the awards event and personally accepted the award, said, "Being awarded The Neptune Award is truly an honor and is an important win for Intevia[®] technology. We're continuing to set industry standards not only in marine but across all business segments and this award validates our efforts."

About TZ Limited www.tzlimited.com

TZ Limited (ASX: TZL) is a publicly listed intellectual property and technology development company with design and engineering operations throughout the US and Europe.

The company is a leader in the integration of intelligence and software control into everyday objects to enable new levels of functionality. Supported by a full product development capability, TZ Limited brings innovation to market through the creation of winning new products and solutions.

Through innovation partnerships with industry leaders, TZ Limited creates opportunities for new product participation and business growth via proven capabilities in developing, licensing and commercializing proprietary technologies.
