## USCOM LAUNCHES NEW SYSTEM BREAKTHROUGH

Monday, March 14, 2005: USCOM Ltd (ASX Code: UCM) today announced the most important technical advancement to its non-invasive cardiac output monitor.

At an international conference in Europe, the company unveiled for the first time its new *"FlowTracer"* fully automated measurement system, an innovative method to dramatically advance the speed, simplicity and efficiency of the USCOM system. The *"FlowTracer"* technology made its debut in Berne Switzerland, where the Chairman of USCOM, Mr Rob Phillips, conducted a live demonstration of the system to an audience of experts from the field of Paediatric and Neonatal Intensive Care.

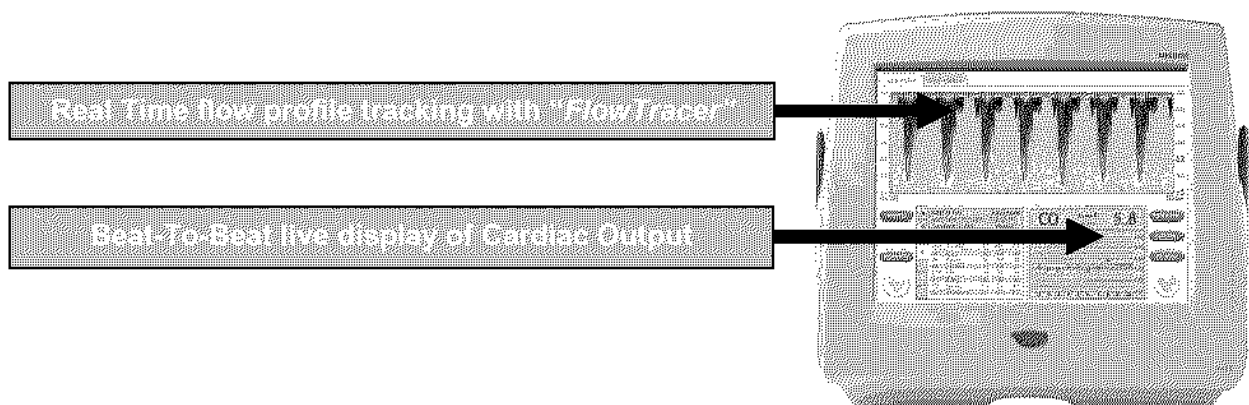

*"FlowTracer"* was formally released and made available for sale worldwide today.

The *"FlowTracer"* software eliminates the need for manual measurement. Until now, USCOM has used its unique semi-automated *"TouchPoint"* system for capturing precision flow data. The new system now provides for one hand operation. Detailed information across 9 parameters of cardiac function can be stored with the touch of a single button.

The *"FlowTracer"* system was developed in-house by USCOM engineers at the company's Sydney head office, where filings for international patent and trademark protection have been lodged. The new system underwent rigorous testing at Beta test sites, prior to its formal release today.

Commenting on the release today, the Chief Executive of USCOM, Mr Gary Davey said *"This represents a real breakthrough in the development of the USCOM system. We believe "FlowTracer" is the best automatic signal tracing method available and will significantly increase the appeal of the USCOM technology across the clinical market. The USCOM engineering team has done an outstanding job in its focus on customer feedback and the design of user-friendly advancements."*

Following the system's debut in Berne, Switzerland, the *"FlowTracer"* technology will also be on display at the 25<sup>th</sup> International Symposium on Intensive Care and Emergency Medicine being held in Brussels, March 21 to 25.
