

MARKET ANNOUNCEMENT

- **Sale to Royal Flying Doctor Service**
- **Further Regional Sales**
- **Initial Customer Sales in Taiwan**

Wednesday, 2 May 2007: Uscom (ASX Code: UCM) is pleased to update shareholders on a number of strategic sales that have closed recently.

The Royal Flying Doctor Service (RFDS) in Queensland has purchased an Uscom unit for use in its regional network. The USCOM 1A will be located in Rockhampton and it is expected, that after a successful implementation at this site, the RFDS will look to expand the use of this equipment to other RFDS bases throughout the State. This will provide an important improvement to the level of care that can be provided to the people of rural Queensland. Director of Medical Services, for the Royal Flying Doctor Service of Australia (Queensland Section), Dr Gerry Costello said "this has been made possible due to a generous donation by NRMA Insurance"

There has been further sales into regional NSW with Dubbo Base Hospital purchasing an Uscom for use in the ICU and Emergency department. This is the second unit at Dubbo and we now have 10 units in regional NSW.

New sales orders have also been received from reputable Taiwan centers, The Veteran General Hospital Paediatric Intensive Care Unit and Chung Gong Memorial Hospital Anaesthesia Department. With the product registrations obtained in 2006 and typical budget cycles for capital equipment taking two years we are happy to see these first customer orders coming through via our distribution partners for North Asia and Taiwan.

Uscom is continuing in its task of creating a strategic alliance in the USA and also furthering the adoption of the technology through publications and inclusion as a standard of care.

About Uscom

Uscom Limited is an Australian medical device company, listed on the Australian Stock Exchange since December 2003. Uscom has developed a device for the safe and accurate measurement of cardiac output, a non-invasive alternative to the current invasive methods. Uscom offers a completely safe, painless and quick method of accurately measuring how well the heart is pumping. With its real-time beat-to-beat information across multiple parameters of cardiac function and advanced serial measurement capabilities, clinicians can accurately quantify the impact of therapy. The device is ideally suited to the Emergency Care setting where it is critical to monitor changes in cardiac output as fluids are applied.

The Company has secured regulatory approval for sale of the Uscom Monitor in Australia, Europe and a number of Asian markets, including Japan, China and Taiwan. Uscom also has a CE Mark certification for Europe and a license from the State Food & Drug Administration for China. The Company received the necessary regulatory clearance for the United States market in February 2005 with the receipt of a 510K Pre Market Notification from the US Food & Drug Administration (FDA).
