

UNITH Announces General Availability of Streaming Avatars – Validated by Customers, Ready for Scale

Unith Ltd (ASX: UNT | FWB: CM3) (“Unith” or the “Company”) is pleased to announce the general availability (GA) of its breakthrough Streaming Avatars, powered entirely by UNITH’s in-house streaming technology — a proprietary real-time system developed, optimised, and operated by UNITH’s engineering team and infrastructure.

Very positive feedback received in Streaming Avatars alpha rollout

Following a successful alpha rollout and validation by several customers, UNITH has received overwhelmingly positive feedback on performance, responsiveness, and reliability in real-world deployments. With this customer proof now established, Streaming Avatars are available to all UNITH customers, enabling organisations to deploy real-time digital humans with confidence.

This technology delivers an approximately 80% reduction in latency, with UNITH’s digital humans now often responding in under one second — delivering image, voice, and accurate content generation simultaneously. The result is a real-time, human-like conversational experience designed for high-demand environments.

The new technology will become the standard for all new Digital Humans created on UNITH’s platform. Digital Humans currently using the previous technology will remain on it until they are migrated, an option exclusively available to API users.

Rakan Sleiman, General Manager of UNITH commented:

“After seeing strong outcomes and overwhelmingly positive feedback across a growing customer base, we’re excited to make Streaming Avatars generally available to all customers. Because everything is built in-house — from architecture through performance optimization — we can deliver this capability at scale and operationally efficiently, without compromising quality.”

Next-gen real-time interaction capabilities to land following GA of Streaming Avatars

With Streaming Avatars now broadly available, UNITH is also unlocking the next generation of real-time interaction capabilities. The new streaming foundation opens the door to many new features, including improved voice controls, more natural interruption handling, and improved gesture management — all designed to make digital human conversations feel more fluid, responsive, and human in live environments.

Purpose-built for human–AI interaction, the platform provides speed, scalability, and cost efficiency to support deployments across customer experience, education, healthcare, and entertainment.

About ÜNITH

Unith Ltd (ASX:UNT) is a technology company that specialises in AI-driven digital human and conversation design solutions. Its focus is the design, development, and deployment of interactive, artificial intelligence (AI)-powered, conversational agents that are realistic, multilingual and scalable. This technology, which can take the form of AI avatars, interacts in a lifelike manner and enhances business clients' customer engagement, education, and entertainment metrics. Unith is now successfully implementing a strategy to monetise its proprietary AI and digital human capabilities.

Unith also operates a growing business-to-consumer (B2C) subscription division, which leverages the value-add created by the company's digital human and conversation design solutions technology. This division, which utilises literally thousands of Unith-created digital humans, generates recurring revenue from clients through subscription models for their services or platforms. Driven by individual business client's requirements, Unith's subscriptions arm can offer a range of services, including access to specific functionalities, tools, or content related to digital humans and AI technology. These subscription services help Unith clients generate a steady income stream and develop long-lasting relationships with their customers.
