About the Scott Coastal Plain Mineral Sands Project.

Astro Resources NL is initially developing the Governor Broome deposits, which forms part of its larger Scott Coastal Plains Mineral Sands Project. The Governor Broome deposits are located approximately 40km southwest of Nannup in the south-west of Western Australia. The deposits are comparable to the successfully mined and rehabilitated Jangardup mineral sands deposit, 20km to the east.

There is a strong market demand for the titanium minerals and zircon in the Governor Broome deposits for paint pigmentation and ceramics manufacture.
