

GOVERNOR BROOME PROJECT DRILL PROGRAMME COMPLETED

Astro Resources NL is an Australian-based mineral resources company focused on the commercial development and production of economically and environmentally sustainable mineral sands deposits, diamonds, gold and other minerals.

Astro Resources NL (**ARO** or **Astro**) is pleased to advise that its air-core drilling programme at its Governor Broome Heavy Mineral Project has been successfully completed.

At Governor Broome West 75 holes were drilled and an additional eight holes were drilled into the Governor Broome North Deposit. Most of the Governor Broome West holes sampled heavy mineral mineralisation that is visually similar to that present directly to the east within the Governor Broome North Deposit.

A further 36 holes tested an area to the east of Governor Broome North that is within a mining schedule developed by TZMI in its Revised Preliminary Study. The drilling should enable the resources within this area to be upgraded from Inferred to Indicated status.

A further 18 holes infilled another area further to the south-east, which was shown to have near-surface mineralisation in earlier drilling.

Heavy mineral separation work has commenced on the samples and results for the first two areas mentioned above are expected by late March. At this stage, a revised resource is expected to be reported by the end of March 2020.

The Board of Astro is pleased with the outcome and look forward to being able to provide the outcome of the Competent Person's report.

The information in this report as it relates to Mineral Resources and Exploration Results for the Governor Broome Deposit is based on information compiled by John Doepel (Director of Continental Resource Management Pty Ltd), who is a member of the Australasian Institute of Mining and Metallurgy. Mr Doepel has sufficient experience in mineral resource estimation, which is relevant to the style of mineralisation and type of deposit under consideration, and is qualified as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting of Mineral Resources and Ore Reserves". Mr Doepel consents to the inclusion in the report of the information in the form and context in which it appears.
