Enerji Sponsors Australasian Cleantech Forum

Following Enerji Limited's (**ASX: ERJ**) ("**Enerji**" or the "**Company**") recent strides towards full market commercialisation of the Opcon Powerbox in Australia, the Company is pleased to advise that it is a key sponsor of the 7th Annual Australasian Cleantech Forum, held in Sydney from 28 February to 2 March 2011. The Cleantech Forum is focused on presenting cleantech companies to the investor community.

Invited to speak alongside many of Australia's leading cleantech companies to cleantech investors, this conference follows an exceptional period for the Company, where it achieved a series of crucial milestones including full funding for up to 11 Opcon Powerboxes, a binding commercial power purchase agreement and an MoU with an installation service partner.

As previously disclosed, the first Opcon Powerbox is to be installed at Horizon Power's Carnarvon Power Station and be generating power and revenue under the power purchase agreement from early 2H this year.

Enerji's Chief Executive Officer, Greg Pennefather, believes Enerji's prominent attendance at the Cleantech Forum will help boost industry, customer and investor awareness of the Opcon Powerboxes' economic and environmental benefits.

"The last 12 months have been momentous for Enerji and I believe the next 12 months will prove to be even more so, as we seek to conclude negotiations with multiple customers regarding further power purchase agreements. Enerji's achievements really give us something substantial to talk about now" said Mr Pennefather.

About Enerji

Enerji (ASX: ERJ) is an emerging green power utility specialising in the provision of 3rd Generation Opcon Powerbox waste heat conversion technology.

Enerji has the exclusive Australian sales and distribution rights to the proven Opcon Powerbox technology, which converts waste heat into green electricity, as well as options for Malaysia, Thailand, Singapore and Sub-Saharan Africa.

The Opcon Powerbox represents a significant commercial opportunity in Australia through application to industrial, mining and power generation operations.

Enerji plans to maximise this opportunity and generate shareholder returns through revenue from long term power purchase agreements.

About Enerji's Opcon Powerbox

- Opcon Powerbox transforms waste heat energy into electricity
- Unique as it utilises the whole spectrum of wasted heat energy. Other cogeneration technologies can only transform high-grade wasted heat.
- Produces up to 20% more electricity without burning any more fuel or creating any emissions
- Lowers CO₂ emissions by up to 15%
- Applicable to numerous industries including resources and power generation
- Developed in Sweden by Stockholm Stock Exchange listed Opcon AB
