Opcon Powerbox installation commenced at Carnarvon project site

Perth-based clean power company Enerji Limited (ASX:ERJ) began installation of Australia's first Opcon Powerbox at the Carnarvon project in Western Australia.

The Opcon Powerbox has been erected on the concrete pad at the site with installation to continue throughout March with commissioning expected by late March. A photograph of the Opcon Powerbox, wrapped in protective plastic, installed on the pad is provided below.

Despite the complex logistics of the operation, the transportation from Perth and installation of the Opcon Powerbox occurred safely and to schedule.

Enerji staff and contractors are on site overseeing construction of the waste heat to power system. Further construction updates, highlights and milestones will be announced in due course.

About Enerji

Enerji Limited is a Perth-based clean power company focussed on commercialising the Opcon Powerbox in Australia.

The Opcon Powerbox cogeneration technology transforms waste heat into electricity and therefore creates significant energy cost savings and reduced CO2 emissions for its customers.

Enerji has exclusive sales and distribution rights for the Opcon Powerbox in Australia and options for Malaysia, Thailand, Singapore, and Sub-Saharan Africa.

The Opcon Powerbox, manufactured in Sweden by Opcon, represents a significant commercial opportunity through application to industrial, mining and power generation operations.

Enerji plans to maximise this opportunity and generate shareholder returns through long-term power purchase agreements.
