

12 February 2016

Dear Shareholder

Blue Sky Alternatives Access Fund Limited (ASX:BAF) – Net Tangible Assets ('NTA') per share increase for January 2016

BAF is pleased to release its NTA report for the month ended 31 January 2016, with a pre-tax NTA increase to \$1.0757 per share, a gain of 0.68% for the month.

The gain this month was primarily driven by the continued accretion in value of BAF's allocation to the Blue Sky Water Fund and strong performance by the Blue Sky Dynamic Macro Hedge Fund, to which BAF also has an allocation. Specifically:

- **Blue Sky Water Fund**– The value of BAF's units in the Blue Sky Water Fund increased by 2.0% in January, predominately due to a rise in the market value of the Fund's water entitlements, although some gains were also realised through the sale of water allocations received during the year. BAF's allocation to the Water Fund represents 24% of its total Net Asset Value as at 31 January. The Water Fund provides a unique opportunity for both yield and long term capital gains, driven by growing Asian demand for food security and the shift towards the higher economic use of agricultural land and water in Australia.
- **Dynamic Macro Hedge Fund** – BAF's investment in the Blue Sky Dynamic Macro Hedge Fund portfolio returned 13.5% in January. Pleasingly, the allocation to this Fund has delivered on its goal of providing a hedge against global market volatility.

BAF's asset class allocations as at 31 January 2016 are as follows:

Asset class	Weight (%)
Private Equity & Venture Capital	23.2%
Real Assets	30.8%
Private Real Estate	29.6%
Hedge Funds	7.7%
Cash	8.7%
Total	100.0%

BAF is the only listed investment company on the Australian Securities Exchange ('ASX') that allows investors to make a strategic allocation to a diverse portfolio of directly managed alternative assets.

Yours faithfully,

Andrew Champion
Executive Director

NEW INVESTMENTS

The Alternatives Fund did not make any new investments in the month of January.

INVESTMENT PERFORMANCE - EXISTING INVESTMENTS

The pre-tax NTA of the Alternatives Fund increased by \$0.0073 per share or 0.68% in January to \$1.0757. The increase was primarily driven by a rise in the value of the Alternative Fund's allocations to the Water Fund and the Dynamic Macro Hedge Fund.

- **Dynamic Macro Hedge Fund**

The value of the Alternatives Fund's units in the Dynamic Macro Hedge Fund rose by 13.5% in January, performing strongly in a period of significant volatility in equities markets. As detailed in December's NTA report, the Dynamic Macro Fund is a portfolio of quantitative trading strategies diversified across currency, commodity, equity and interest rate markets. The Fund uses derivatives and short selling in its strategy execution, through a proprietary econometric method of allocating risk.

Pleasingly, the portfolio achieved its goal of providing a hedge against global market volatility.

- **Diversified Quant Hedge Fund**

The Alternative Fund's allocation to the Diversified Quant Hedge Fund provided a positive return of 0.9% in January, achieving its goal of providing a return which is not correlated to equities markets.

- **Water Fund**

The value of the Alternatives Fund's units in the Blue Sky Water Fund increased by 2.0% in January, largely reflecting continued accretion in the value of water entitlements held in the Portfolio. The Fund also completed, and realised gains on, additional sales of water previously allocated to the Portfolio in this year.

After a very dry December, widespread summer rains provided some welcome relief to the majority of the Murray-Darling Basin ('MDB') from mid-January. While the rains did provide some great benefit to farmers and graziers in isolated districts, it was insufficient to create any significant river in-flows. Irrigation farmers in the southern MDB have now had sufficient water to make their crops this summer and harvest season is now gearing up across a large range of food and fibre crops. Water entitlement price gains are expected to be more modest for the next few months in anticipation of the winter rainfall season and until irrigators begin focusing on water requirements for their next crop.
