ASX ANNOUNCEMENT

ALLTYPE ENGINEERING SECURES CIRCA \$40M WORKS ACROSS MULTIPLE INDUSTRIES AND LOCATIONS

Highlights

- Alltype Engineering has secured its first major gas compression and processing facility construction contract in the Northern Territory, near Daly Waters, in the centre of the emerging Beetaloo Basin gas region for Tamboran Resources and Daly Waters Energy.
- Alltype Engineering continues to be active in the Western Australian domestic gas transmission industry with offtake and metering facilities, control systems upgrades and facilities works spread from Karratha in the Pilbara region through the Midwest and in the Perth metropolitan area.
- As the company celebrates 40 years of operation, it has secured major piping fabrication packages in the water infrastructure, water treatment and petrochemical industries, with Mild Steel Cement Lined (MSCL), Stainless Steel and Carbon Steel piping packages for numerous clients and locations.

WestStar Industrial Limited (ASX: WSI) (the "**Company**" or "**WestStar**"), an Australian industrial services company that operates within the energy, resources, utilities, marine, defence and infrastructure sectors.

Alltype Engineering Pty Ltd, a wholly owned subsidiary of the Company, has been awarded several major contracts valued at approximately \$40 million by multiple clients being asset owners, asset operators, Tier One contractors and alliance delivery teams. The contracts provide an ongoing work schedule throughout the rest of the financial year to June 2026 and extending into the period to 31 December 2026, re-establishing Alltype Engineering's workflow pipeline as other projects are nearing completion or have been completed.

For Alltype Engineering, these contracts are the culmination of significant market development, tendering and estimating works, repeat business from long standing clients, new customers spread across Australia and growing reputation as a reliable SMP and E&I Contractor for remote area complex projects based on successful delivery of numerous gas processing and compression facilities across the country. The spread of the value of these contracts across multiple clients, many already working with Alltype Engineering, provides for a more consistent workflow scheduling and cashflow forecasting ability.

Alltype Engineering Managing Director, Kelvin Andrijich commented:

"With major projects coming to their scheduled conclusion on the east coast, to secure these various contracts is both timely and in line with our strategy to maintain diverse industry exposure through the cyclic nature of the resources industry. Alltype Engineering has a significant capability and capacity with respect to MSCL fabrication and installation which is now being delivered statewide and nationally, with some of the fabrication works destined for South Australia. Further north in the highly remote Beetaloo Basin, Alltype Engineering has secured the underground services and Structural Mechanical and Piping construction services package for the compression facility for the Tamboran Resources and Daly Waters Energy operated Shenadoah South Pilot Project, with the produced gas supplying the Northern Territory domestic gas market. Having completed numerous technically similar facilities in the past 18 months in Southwest Queensland, the success of those projects provided a strong resume of experience to deliver one of the remotest production facilities in the country. We look forward to delivering these projects as we continue to build backlog within the company"

-Ends
