Sol Plaatje Processing Agreement executed

Highlights

- Term Sheet signed with Sibanye Gold
- Ore from Sol Plaatje Project now being shipped to nearby Ezulwini Plant
- Ezulwini is approx. 40kms from SPP with capacity to take up to 15,000 tonnes pm
- Since recommencement at SPP over 7,400 tonnes of ore has already been stockpiled.

West Wits Mining Limited (ASX : WWI) (“the Company” or “West Wits”) is pleased to announce it has executed a term sheet with Sibanye Gold Limited (“Sibanye”) for the processing of reef material through the Ezulwini Gold Process Plant. Under the agreement West Wits will truck ore from its Sol Plaatje Project (“SPP”), located within the Soweto Cluster Gold Project, Johannesburg, South Africa, to the nearby Ezulwini plant approx. 40kms away. This agreement will commence as a trial as logistics and processes will need to be assessed over the first month.

Michael Quinert, Chairman commented, “The Company is delighted with this outcome. We assessed a number of proposals and options, and decided this treatment option was the best opportunity for the Company, if it could be achieved. Whilst it has taken a number of months to be executed, to now have a company of Sibanye’s industry standing processing West Wits ore is an excellent result. With this agreement now in place West Wits has commenced shipping ore to Ezulwini under the trial arrangement.”

Under the agreement West Wits will ship 5,000 – 10,000 tonnes from SPP for the trial which will be treated from the 1st August 2017, being the commencement date of a new production month for Sibanye. Following a successful outcome of the trial a formal agreement will be concluded which will contain the terms and conditions provided for in the term sheet and include a minimum 12 month term with an option to renew for a further 12 months, at the election of Sibanye. Ore will be processed on a simple cost recovery and profit share model. The Ezulwini plant process only requires ore crushed to 200mm which significantly reduces crushing costs for West Wits. Furthermore, the overall cost structure at Ezulwini is substantially below the costs which were charged by the previous processor used for SPP ore.

As previously released, operations were recommenced at SPP on 20th June last. Since recommencement over 7,400 tonnes of ore have been extracted, put through a primary crusher and stockpiled. This ore is now being shipped to Ezulwini. From a standing start the production rate for this month is nearing a higher monthly production than the Company achieved within any month under its previous arrangements.

West Wits will continue to make further updates as production and processing continue to ramp up over the coming month.
