

## Exploration Update

### *RC and Diamond Drill Program completed and new results from Gordons Project*

### *Completion of Heritage Survey at Ironstone Well and Barwidgee to enable drill testing of key Yandal belt project targets*

#### Gordons Project

##### Malone, Alderman & Andrews Prospect Drilling

- Two diamond holes (541.2m) and thirteen RC holes (1,963m) testing a range of targets including high-grade intercepts at the Malone “Kink Zone” (**5m @ 7.7g/t Au** from 210m and **3m @ 8.8g/t Au** from 190m) have been completed.

##### Zoehrer, Star of Gordon and Meuleman Prospect Results

- Results received from RC holes drilled at the Zoehrer Prospect, strategically located between the Gordon-Sirdar Mine and Yandal’s Star of Gordon prospect, have returned a number of broad intercepts including;
  - **28m @ 1.3g/t Au** from 176m including **4m @ 3.6g/t Au** (YRLRC0806 – 4m composites)
  - **16m @ 0.9g/t Au** from 132m including **4m @ 3.0g/t Au** (YRLRC0805A – 4m composites)
- Results received from 16 RC holes at Star of Gordon have returned further encouraging intercepts including;
  - **5m @ 1.4g/t Au** from 67m including **1m @ 6.8g/t Au** (YRLRC0784)
  - **14m @ 0.4g/t Au** from 33m including **2m @ 2.2g/t Au** (YRLRC0763)
- Aircore results from first pass wide-spaced drilling along the prospective Alderman felsic-mafic contact have returned a strong intercept;
  - **8m @ 1.7g/t Au** from 52m including **4m @ 2.6g/t Au** (YRLAC0898 – 4m composites)
- Planning for follow-up drilling is underway pending the completion of a revised geological interpretation incorporating diamond hole structural logging and the most recent assay results.

#### Ironstone Well and Barwidgee Projects

- A cultural heritage clearance survey covering key prospects has been completed by representatives of the Kultju Native Title holders.
- Preparations are underway to commence aircore and RC drill testing of key prospects covered by the survey including Sim’s Find, Flinders Park and Newport.

**Yandal Resources' Managing Director; Mr Tim Kennedy commented:**

*"Yandal confirmed earlier this year that the Malone prospect has the potential to host a significant high-grade gold discovery very close to operating mines and infrastructure and a short distance from the town of Kalgoorlie-Boulder. The recently completed diamond and RC drilling programs were the next step in understanding the controls of mineralisation and potential extent of the system. We look forward to receiving the results of these program over the next couple of months.*

*We were very encouraged by recent Aircore results that highlighted an emerging new mineralised position at the Meuleman prospect along the prospective Alderman felsic-mafic contact. The geological team took the initiative and undertook a quick initial test of this position using the RC rig that happened to be onsite at the time that the results were received.*

*Further to the north in our Yandal Belt tenements it was good to complete the cultural heritage survey which will enable drill testing of some the highest ranked targets in our extensive portfolio."*

**Yandal Resources Ltd (ASX: YRL, "Yandal Resources" or the "Company")** is very pleased to provide an update on exploration activities at the 100%-owned Gordons, Ironstone Well and Barwidgee gold projects located in the eastern goldfields, in Western Australia (Figure 1).

**Figure 1 – Yandal Resources' gold project locations.**

## **Gordons Project**

### **Malone, Alderman & Andrews Prospect Drilling (Figure 2 & 3)**

A drilling program comprising two diamond holes for a total of 541.2m and thirteen RC holes for 1,963m has been completed at the Gordon's Project.

The purpose of the diamond drilling was to test high grade mineralisation intercepted at the **Malone prospect** in two reverse circulation ("RC") drill holes as reported in the March Quarter 2022 including:

- **5m @ 7.7g/t Au** from 210m including **1m @ 15.4g/t Au** from 212m (YRLRC0727); and
- **3m @ 8.8g/t Au** from 190m including **1m @ 19.4g/t Au** (YRLRC0811)

These two intercepts are situated approximately 30m from each other in the footwall to the Malone contact adjacent to a prominent flexure referred to as the "Kink Zone", an ideal location for localising gold mineralisation. The diamond drilling was designed to provide further lithological and structural information with a particular focus on confirming mineralisation controls and geometry. The core has been logged by our team with input from our consultant structural geologist Fop Vanderhor. This information was used to assist in targeting the recently completed step-out RC program. Core has been processed and samples dispatched to the laboratory for analysis.

At **Malone** four RC holes were completed on three 100m spaced lines north-west and south-east of high-grade intercepts in YRLRC0727 and YRLRC0811, testing for strike extensions of mineralisation. Initially six holes were planned in this location however the final two holes could not be completed due to lack of rig availability and it is intended that they will be completed in a subsequent program. A further six RC holes were drilled to test strong aircore intercepts adjacent to the Malone contact and 600m further to the west in the footwall including:

- **4m @ 1.0 g/t Au** from 52m (YRLAC2040)
- **13m @ 0.3g/t Au** from 71m (YRLAC0690)<sup>5</sup>

Two RC holes were drilled at the Andrews prospect, south of Malone as a follow-up test of an encouraging intercept of **3m @ 2.2g/t Au from 97m** (YRLRC0622). Due to very difficult ground conditions the full target depth was not reached in either of these holes and the target will be the subject of further follow-up drilling in a later program.

A single RC hole was drilled at the end of the program to test an aircore intercept of **8m @ 1.7g/t Au (52m)** including **4m @ 2.6g/t Au** (YRLAC0898 4m composite) along the Alderman contact at the **Meuleman prospect** that was received during the course of drilling (refer to this report).

All RC samples have been collected and submitted to the laboratory for analysis. Further follow-up drilling will be planned once all results have been received and interpreted.

**Figure 2 – Location map of key prospects, drill collars and April-May Diamond and RC drilling and new results within the Gordons Gold project in relation to project tenure and regional geology.**

**Figure 3** – Malone and Hussey prospects drill collar location map coloured by maximum gold grade (g/t Au) projected to the drill collar with interpreted geology (Refer to Tables 1 & 2 for all new results).

### Zoehrer, Star of Gordon, Red Dozer, Marsh, Langer & Alderman Prospect Results

Preliminary and final assay results have been received from aircore, RC and diamond drilling completed over a number of prospects in the March Quarter 2022. Significant results are summarised below and details of all results are provided in Table 1.

At the **Zoehrer** prospect, located ~1.6km directly NNW along strike from the Gordon Sirdar underground gold mine, assay results were received from 10 RC holes (3,795m) testing for strike potential strike extensions of the Gordon Sirdar mineralisation system.

Results included a number of encouraging intercepts as outlined below;

- **28m @ 1.3g/t Au** from 176m including **4m @ 3.6g/t Au** (YRLRC0806 – 4m composites)
- **16m @ 0.9g/t Au** from 132m including **4m @ 3.0g/t Au** (YRLRC0805A – 4m composites)

**These results are considered significant as they are strategically located between the Star of Gordon prospect and the Gordon Sirdar mine. There is little effective historic drilling in this area, particularly to the west and follow-up drilling is being planned.**

At the **Star Gordon** prospect assay results were received from 19 RC holes (2,553m) and 2 diamond holes (551.3m) testing for strike and down-dip extensions and repetitions of high-grade mineralisation previously reported for Star of Gordon including **10m @ 8.4g/t Au** in YRLRC0630<sup>6</sup>.

Significant intercepts include;

- **5m @ 1.4g/t Au** from 67m including **1m @ 6.8g/t Au** (YRLRC0784)
- **14m @ 0.4g/t Au** from 33m including **2m @ 2.2g/t Au** (YRLRC0763)

These recent results together with earlier diamond drilling completed at Star of Gordon have confirmed the complexity of structural controls on mineralisation. Results are currently being incorporated into an updated geological model of the area which includes input from our consultant structural geologist. Further drilling will be planned upon completion of the updated model.

**Figure 4** – Star of Gordon and Zoehrer drill collar location map coloured by maximum gold grade (g/t Au) projected to the drill collar with interpreted geology (Refer to Table 1 for all new RC results).

Results received from twelve RC holes (1,282m) drilled at the **Langer, Marsh and Red Dozer** prospects, include a number of low order intercepts as detailed in Table 1. The requirement for follow-up drilling is being assessed.

Results have been received from 416 aircore holes (25,085m) testing for extensions of mineralisation at several prospects as well as providing a first pass test along prospective felsic-mafic contacts as illustrated in Figure 2 and detailed in Table 2.

The standout result came from the **Meuleman Prospect**, along the Alderman contact, which returned an intercept of **8m @ 1.7g/t Au** from 52m including **4m @ 2.6g/t Au** (YRLAC0898 4m composites). This intercept is located 740m south-east of an intercept of 16m @ 1.3g/t Au (YRLDD0015) reported last quarter<sup>1</sup> (Figure 5). The result from YRLAC0898 was returned while the recent RC drilling program was still in progress which enabled an initial follow-up RC hole to be completed. Further drilling will be planned upon receipt of results from the initial follow-up RC hole.

**Figure 5** – Meuleman and Bradman prospects drill collar location map coloured by maximum gold grade (g/t Au) projected to the drill collar with interpreted geology (Refer to Table 2 for all new aircore results).

### Ironstone Well and Barwidgee Projects

The Ironstone Well and adjacent Barwidgee projects cover over 470km<sup>2</sup> of highly prospective and under-explored Yandal Greenstone Belt, east of Wiluna in Western Australia (Figures 1 & 6).

Significant exploration on these projects has been on hold pending the completion of cultural heritage clearance survey by the Kultju (Aboriginal Corporation) RNTBC (“Kultju AC”). The Kultju AC hold native title rights to an area which includes the much of the Ironstone Well and Barwidgee projects. Yandal entered into an Exploration & Prospecting Deed with the Kultju AC in October 2021 which amongst other things provides a protocol for the protection of cultural, heritage and environmental values of the land, during exploration activities.

In late April representatives of the Kultju AC completed a heritage survey to enable aircore and RC testing of key prospects including **Sims Find to Copan, New England Granite, Newport, Flushing Meadows, Flinders Park, Quarter Moon and Oblique** (Figure 6).

Priority for initial testing will be the **Sims Find Prospect** to follow-up multiple high-grade intercepts discovered in wide-spaced RC drilling in 2021 (Figures 7). These include;

- **6m @ 9.0g/t Au** from 172m including **1m @ 40.0g/t Au** and **1m @ 10.9g/t Au** (YRLRC1011)<sup>3</sup>
- **1m @ 10.25g/t Au** from 81m (YRLRC1014)<sup>3</sup>
- **8m @ 24.3g/t Au** from 9m including **1m @ 129.0g/t Au** from 12m (YRLRC457)<sup>3</sup>
- **3m @ 20.9g/t Au** from 30m including **1m @ 62.3g/t Au** from 30m (YRLRC447)<sup>3</sup>
- **5m @ 6.5g/t Au** from 17m including **1m @ 30.4g/t Au**<sup>1</sup> from 17m (YRLRC445)<sup>3</sup>

Preparations are underway to commence drilling programs as soon as possible. Hole locations for the initial program will be finalised upon receipt of the survey report and associated work program clearances which are anticipated late May.

**Figure 6 – Ironstone Well and Barwidgee Projects showing the location of proposed holes covered by the recent Heritage survey. Note that drill hole locations will be finalised upon receipt of the heritage survey report.**

**Figure 7 – Sims Find prospect plan showing interpreted geology, selected RC intercepts from previous programs and areas for follow-up testing (red arrows).**

## Next Steps

Key exploration activities planned during the June Quarter include;

- Finalise aircore and RC programs to testing priority targets at Ironstone Well and Barwidgee including Sims Find to Copan, New England Granite, Newport, Flushing Meadows, Flinders Park, Quarter Moon and Oblique. Commence drilling pending receipt of heritage approvals.
- Receive and interpret pending aircore, RC and diamond drilling results from Malone, Zoehrer and Meuleman prospects at the Gordons project and plan follow-up drilling.
- Review historic and recent drilling data at the Mt McClure Project to establish controls on potential higher grade plunging shoots and the potential for establishing an initial Mineral Resource Estimate at Success and Challenger.

**Notes to Tables 1-2;** 1. An accurate dip and strike and the controls on mineralisation are only interpreted and the true width of mineralisation is unknown at this stage. 2. For AC and RC drilling, 4m composite samples are submitted are analysed using a 50g Aqua Regia digest with Flame AAS gold finish (0.01ppm detection limit) and selected intervals are resampling at 1m intervals and analysed using a 50g fire assay with ICP-MS finish gold analysis (0.01ppm detection limit), for DD drilling samples are analysed using a 50g fire assay with ICP-MS finish gold analysis (0.01ppm detection limit) by Aurum Laboratories in Beckenham, Western Australia. 3. Au1 is the original assay, Au2 is the highest grade from duplicate or repeat samples if they have been completed. 4. g/t (grams per tonne). 5. Intersections are calculated over intervals >0.10g/t or as indicated. 6. Drill type AC = Air-core, RC = Reverse Circulation, DD = Diamond. 7. Coordinates are in GDA94, MGA Z51. 8. # denotes an end of hole assay. 9. ABD denotes hole abandoned before target depth. 10. NSA denotes no significant assay. 11. \* denotes a 4m, 3m or 2m composite assay unless otherwise indicated.

## About Yandal Resources Limited

Yandal Resources listed on the ASX in December 2018 and has a portfolio of advanced gold exploration projects in the highly prospective Yandal and Norseman-Wiluna Greenstone Belts of Western Australia.

Yandal Resources' Board has a track record of successful discovery, mine development and production.

## November 2020 Mineral Resource Estimate Summary Table – Flushing Meadows Gold Deposit

\* Reported above 0.5g/t Au lower cut-off grade, refer to Yandal Resources Ltd ASX announcement dated 4 November 2020 for full details.

## Competent Person Statement

The information in this document that relates to Exploration Results, geology and data compilation is based on information compiled by Mr Trevor Saul, a Competent Person who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Saul is the Exploration Manager for the Company, is a full-time employee and holds shares and options in the Company.

Mr Saul has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Saul consents to the inclusion in this announcement of the matters based on this information in the form and context in which it appears.

The information in this announcement that relates to the Flushing Meadows Mineral Resource Estimate is based on information compiled and generated by Andrew Bewsher, an employee of BM Geological Services Pty Ltd ("BMGS"). Both Andrew Bewsher and BMGS hold shares in the company. BMGS consents to the inclusion, form and context of the relevant information herein as derived from the original resource reports. Mr Bewsher has sufficient experience relevant to the style of mineralisation and type of deposit under consideration and to the activity which is being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the JORC 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'.

## Appendix 1 – Gordons Gold Project JORC Code (2012) Table 1, Section 1 and 2

Mr Trevor Saul, Exploration Manager of Yandal Resources compiled the information in Section 1 and Section 2 of the following JORC Table 1 and is the Competent Person for those sections. The following Table and Sections are provided to ensure compliance with the JORC Code (2012 edition) requirements for the reporting of Mineral Resources.

### Section 1 Sampling Techniques and Data

| Criteria                     | JORC Code explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Commentary                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
