

Allot Communications Launches Allot Secure Service Gateway, Delivering Integrated Network Visibility, Security and Control to Enterprises

Powerful and cost-effective appliance series blends the capabilities of Allot's Service Gateway platform with advanced network and web security

October 13, 2016 – Hod Hasharon, Israel – [Allot Communications Ltd](#), a leading provider of security and monetization solutions that enable service providers and enterprises to protect and personalize the digital experience, has unveiled the [Allot Secure Service Gateway](#) series, a first-of-its-kind product series that combines application-based visibility and control with web security and DDoS protection in a single, scalable appliance.

With mobility and cloud migration, enterprises need to ensure that employees and customers connect securely and work productively with mission-critical applications at all times and from any location. The new solution goes further than traditional WAN Optimization Controllers (WOC) and Secure Web Gateway (SWG) solutions, enabling midsize to large enterprises to enhance productivity and protect their networks and users at scale with significantly lower total cost of ownership (TCO).

The Allot Secure Service Gateway platform provides:

- **Complete visibility and control**, utilizing real-time application-based traffic monitoring and analytics to deliver granular application level visibility and ensure higher user quality of experience (QoE). Flexible policy tools enable network managers to align IT resources with business priorities, reduce the enterprise cyber-attack surface and increase productivity.
- **Powerful web security**, maximizing the business value of cloud applications by detecting malware, phishing and other web threats, and blocking attacks before they harm application performance and user productivity.
- **Scalability and lower Total Cost of Ownership**, integrating multiple functions in an Intel-based platform with high port density that scales from 1,000 to 100,000 users in a single appliance.
- **High performance and reliability**, allowing the same carrier-class level performance that Allot brings to many of the world's largest network operators. Allot SSG offers flexible redundancy configurations plus passive bypass with automatic port failover, maximizing uptime and availability.
- **Robust DDoS Protection**, combining application-based traffic management alongside behavioral based DDoS mitigation engine to provide rapid anomaly detection and swift attack mitigation before they are able to disrupt network services and availability.

"The migration to mobility and cloud applications has introduced Quality of Experience, security, and shadow IT challenges for enterprise networks," said Ronen Priel, Vice President Product Management & Marketing at Allot Communications. "Allot Secure Service Gateway helps businesses overcome these challenges in a more holistic way and at much lower TCO. We achieve this by addressing network visibility, performance, protection and productivity requirements across the entire network in one appliance instead of multiple appliances that are traditionally required."

Allot Secure Service Gateway is offered initially in two models that meet the requirement of mid to large enterprises with up to 30Gbps of capacity. Mid-range: Allot Secure Service Gateway 600 (SSG600), and high-end: Allot Secure Service Gateway 800 (SSG800).

Further product and pricing information about Allot Secure Service Gateway is available on the [Allot Communications website](#) or through the local sales representatives and authorized channel partners.
