

Pelephone Deploys Allot WebSafe Personal to Deliver Superior Security and Value to Subscribers

The tier-1 mobile operator's subscribers benefit from advanced network based security including virus and malware protection

HOD HASHARON, Israel, July 10, 2018 /PRNewswire/ -- Allot Communications Ltd. (NASDAQ: ALLT) (TASE: ALLT), a leading global provider of innovative network intelligence and security solutions for service providers worldwide, announced today that Pelephone, an Israeli-based Tier-1 mobile service provider, is deploying Allot WebSafe Personal to better protect subscribers against viruses and malware, as well as provide parental controls and other security value added services. The solution allows the operator to keep its subscribers protected from evolving online threats by delivering effective, up-to-date anti-malware protection across any device.

With the proliferation of smartphones and tablets, online activity has increased dramatically – particularly among teens and children. More than 50% of mobile users worldwide [access the Internet](#) by phone, and cyber criminals are taking notice. Viruses, spam, spyware, phishing, and trojans are among the many malware threats that Internet users face every day, and mobile users expect communications service providers (CSPs) to keep them protected.

"As a leading mobile communications provider, Pelephone must be able to offer its customers unique value-added services and a safe, high quality online experience, protecting them from the uptick in the volume and sophistication of mobile malware threats that target users everywhere," said Ran Guron, Chief Executive Officer, Pelephone. "Allot's WebSafe Personal allows us to deliver a more personalized and secure digital experience to subscribers."

Allot WebSafe Personal provides network-based anti-malware, powerful anti-virus, anti-phishing, and anti-spam capabilities for email and web traffic, protecting consumers against mobile device damage and the theft of personal information. It also allows parents to monitor and control their children's online activity, with periodic reports to keep them protected from threats they encounter. Communications Service Providers (CSPs) are increasingly turning to Security as a Service (SECaaS) to quickly and cost-effectively offer customers value-added options while generating new streams of revenue and safeguarding the user experience.

Allot's scalable network based security solutions offer single and multi-tenancy operation to fulfill consumer and business demands to create a safer connected experience, with support for millions of individual users that can be managed from a unified management console. This gives CSPs complete visibility of network traffic and online user behavior, enabling them to analyze and refine data plans accordingly, and to fulfill consumer and business demands for a safer online experience.

"Operators like Pelephone are well-positioned to take advantage of new and innovative monetization opportunities through well targeted customer engagement," commented Erez Antebi, President & CEO, Allot Communications. "Allot's network based mobile security solutions have demonstrated extremely high penetration rates with several top tier-1 mobile service providers."
