IPS Securex to market first mobile workflow platform in the ASEAN region

SINGAPORE, 02 December 2014 – IPS Securex Holdings Limited (“IPS Securex” or the “Company” and together with its subsidiaries, the “Group”), a leading provider of security products and integrated security solutions with an established regional presence in the Asia-Pacific, today announced that its subsidiary, IPS Securex Pte. Ltd. (“IPSPL”), has entered into a framework cooperation agreement (the “Agreement”) with Bio-Nexus Research Pte. Ltd. (“BNR”).

The Agreement with BNR allows IPSPL to integrate BNR’s patented “mobile workflow engine” software platform into various solutions (the “Solutions”) and authorises IPSPL to promote, market and sell the Solutions to all the ASEAN countries on an exclusive basis, which is subject to certain minimum annual turnover targets for the years ending 31 December 2015 to 2018.

Commenting on the Agreement, Mr Kelvin Lim (林青宋), Executive Director and Chief Executive Officer of IPS Securex said: ***“We are proud to be the system integrator of this innovative software platform in the ASEAN region. Besides enhancing our existing range of solutions, this secured data workflow software is very relevant to the needs of our existing customers as well as new customers that we will market to in the ASEAN region.”***

BNR is a company that is engaged in the research, design and development of a “mobile workflow engine” software platform which includes but is not limited to, a command and control solution with remote supervision capabilities, for military and civilian medical operations, and aerospace and utility market tactical maintenance.

BNR's "mobile workflow engine" software platform is designed to interface with third party existing devices and any type of Enterprise Resource Planning ("ERP") software or central servers, to securely receive and send data at the point of contact or inquiry. With the platform, critical data is immediately transferred and recorded at the receiving centre without having any loss of information, allowing for faster decision-making and efficient workflow processing.

BNR's "mobile workflow engine" software platform is classified into three systems, namely, Bio-Nexus System, Aero-Nexus System and Care-Nexus System. Bio-Nexus System is focused on the medical emergency sector in providing a full mobile tactical-medical platform. The Aero-Nexus System and Care-Nexus System are focused on the aeronautics sector and the utility sector, respectively, and provide full real-time mobile tactical-operational-maintenance platforms. These three systems can be utilised by both civilian and military personnel.
