For the calculation of full dilution percentage, the following was considered:

Exercise of 18,431,360 long-term warrants exercisable (via cashless mechanism) for 3,096,296 shares. Since warrant exercise is conditional on meeting a price target depending on the series, the number of shares calculated is the greater of (1) the warrant series target price; or (2) the closing price of the stock as of 31/12/2025. See breakdown of prices used for the calculation below:

1. 14,966,334 warrants based on share price of NIS 19.88, being the target price for those warrants
2. 824,770 warrants based on share price of NIS 25.78, being the target price
3. 797,340 warrants based on share price of NIS 29.24, being the target price
4. 1,842,916 warrants based on share price of NIS 22.72, being the target price

The actual number of shares to be allocated as a result will vary based on the actual share price at the time of exercise (if it is higher than the target price).
