CONTENTS

This report on Form 6-K of MAGIC SOFTWARE ENTERPRISES Ltd. consists of the following documents, which are attached hereto and incorporated by reference herein:

1. Magic Software Works with Microsoft SharePoint 2010 to Extend Oracle Systems

PRESS RELEASE

Magic Software Works with Microsoft SharePoint 2010 to Extend Oracle Systems

Or Yehuda, Israel — July 07, 2011 — Magic Software Enterprises Ltd. (NASDAQ: MGIC), a global provider of mobile, cloud, and on-premise enabled [application platforms](#) and [business integration solutions](#), announced today that on July 11, 2011, it will be making an announcement to the Microsoft Worldwide Partner Conference in Los Angeles that Microsoft Corp. partners are now eligible for a SpeedTrack Authorization Program to offer the iBOLT integration platform for Microsoft SharePoint 2010, JD Edwards and PeopleSoft. Companies deploying these systems can use Magic Software's iBOLT Integration for Microsoft SharePoint 2010 to share information through their SharePoint 2010 deployment. As an initial step, Magic Software is promoting iBOLT with capabilities for SharePoint 2010 and Oracle JD Edwards.

The success of SharePoint 2010 has generated market demand for a simple approach to business process orchestration with back-end software systems, including legacy applications. iBOLT's "drag, drop and configure" approach to business process integration means that Oracle customers can utilize SharePoint 2010 to manage the overall user experience and iBOLT to orchestrate the back-end integration, regardless of line-of-business application or database platform.

[iBOLT](#) dramatically reduces the amount of time necessary to design new business process flows and provides a robust and scalable solution for integration. This is achieved through Magic Software's smart metadata-driven approach. This approach helps future-proof integration projects so that when underlying technologies and systems change, adaptation efforts are kept to a minimum.

Magic Software provides Microsoft partners with additional tools and solutions to help offer SharePoint 2010 to the enterprise market. The SpeedTrack Authorization Program that will be announced at the Microsoft Worldwide Partner Conference includes simplified authorization, technical training and go-to-market resources.

"Magic Software's iBOLT represents a vast simplification of effort for both enterprise customers and their service providers. Businesses that are already using SharePoint 2010 and Oracle JD Edwards, for example, are able to implement end-to-end business processes and changes almost effortlessly," said Magic Software Enterprises Americas CEO Regev Yativ.

Commitment to the Needs of Oracle Customers

SharePoint 2010 offers enterprise-grade capabilities in areas such as content management, business intelligence, portal, search, social software and more. Today's announcement reflects a commitment to enable customers to unlock the value of backend business data and make it accessible to the entire organization.

"SharePoint 2010 is an easy and effective way for users to interact with the processes and data important for their business," said Jared Spataro, director of SharePoint product marketing at Microsoft. "Solutions like iBOLT will

enable customers of all sizes to create SharePoint 2010 applications that access legacy business applications.”
