Nordic Aqua Partners: Operational update for Q2 2025 and YTD 2025

The commercial harvest continued during the second quarter of 2025 and increased to full run-rate of Stage 1 in June.

Harvest

In Q2 2025, Nordic Aqua had commercial harvest of 756 tonnes head-on gutted (HOG), achieving an average harvest weight of 4.6 kg (HOG), equivalent to 5.6 kg live weight (LW), with a superior rate of 99%.

Total harvest YTD 2025 was 1,043 tonnes (HOG), whereof commercial harvest amounted to 955 tonnes (HOG), achieving an average harvest weight of 4.9 kg (HOG), equivalent to 5.9 kg (LW), with a superior rate of 99%.

Farming

Production during the second quarter of 2025 was 730 tonnes bringing the total biomass to 2,625 tonnes. The second half of May and first half of June were affected by extensive activity of transferring large fish to optimize stock size sorting. Large fish have significantly lower appetite in the days after transfer, and fish are starved prior to transfer.

Production YTD 2025 was 1,662 tonnes.

Overall biological performance remains strong with good fish health, no maturation and high survival rates for all batches.

The full Q2 2025 report will be released on 26 August 2025 at 07:00 CET.
