

Nordic Aqua Partners: Operational update for Q3 2025 and YTD 2025

Harvest

In Q3 2025, Nordic Aqua had commercial harvest of 630 tonnes head-on gutted (HOG), achieving an average harvest weight of 3.1 kg (HOG), equivalent to 3.8 kg live weight (LW), with a superior rate of 98%. To optimize the number of fish in the facility, a large number of small fish were harvested in the quarter. This is to let other fish grow larger, in line with the new strategy to produce larger fish.

Total harvest YTD 2025 was 1,673 tonnes (HOG), whereof commercial harvest amounted to 1,585 tonnes (HOG), achieving an average harvest weight of 4.1 kg (HOG), equivalent to 4.9 kg (LW), with a superior rate of 99%.

Farming

Production during the third quarter of 2025 was 969 tonnes bringing the total biomass to 2,835 tonnes.

Production YTD 2025 was 2,631 tonnes.

Overall biological performance remains strong with good fish health, no maturation and high survival rates.

Project

Subsequently on 10 October 2025, Nordic Aqua is pleased to announce the successful transfer of fish into the first grow-out RAS unit of Stage 2. The team is very proud of the new stunning facility of Stage 2, that now is receiving fish. This marks the completion of the first of four Stage 2 grow-out RAS units, with the remaining units set to receive fish in the coming months. The first harvest from Stage 2 fish, that was laid in as egg in Q3 2024, is expected to be in September 2026.

The full Q3 2025 report will be released on 11 November 2025 at 07:00 CET.
